The risk factors are classified as under for the sake of better clarity and increased understanding.

1. Our business is subject to government policies. If we fail to comply with the applicable regulations prescribed by governments and regulatory agencies, our business, results of operations and financial condition could be adversely affected.

We operate in a regulated industry and our operations are subject to regulation by Bio-fuel Authority of Government and Rajasthan State Government as our manufacturing unit is situated in Rajasthan. We have ongoing obligations under National Policy on Bio-Fuels and Rajasthan Biofuels Rules, 2019. The penalties for non-adherence with these regulations can be severe, including the revocation or suspension of our business license, imposition of fines in those jurisdictions. There being no past instances of non-compliance since incorporation, if any non-adherence persists in our manufacturing process, the relevant regulator may amend or withdraw our existing approvals to manufacture and market our products in such jurisdiction, which could adversely affect our business, financial condition and results of operations.

If we fail to comply with applicable statutory or regulatory requirements, there could be a delay in the submission or grant of renewal for the manufacturing of our products. Moreover, if we fail to comply with the various conditions attached to such approvals, licenses, registrations and permissions once received, the relevant regulatory body may suspend, curtail or revoke our ability to market such products or impose fines upon us which will adversely affect operation of our Company.

For further details of our Business, please refer to chapter titled “Business Overview” beginning on page 96 of this Prospectus.

2. We require certain approvals and licenses in the ordinary course of business and are required to comply with certain rules and regulations to operate our business, any failure to obtain, retain and renew such approvals and licenses or comply with such rules and regulations may adversely affect our operations.

We require several statutory and regulatory permits, licenses and approvals to operate our business. Many of these approvals are subject to periodical renewal. For instance, our Company has applied for renewal of Certificate of Biofuel Authority Rural on July 4, 2024. Any failure to renew the approvals that may expire, or to apply for the required approvals, licences, registrations or permits, or any suspension or revocation of any of the approvals, licences, registrations and permits that have been or may be issued to us, could result in delaying the operations of our business, which may adversely affect our business, financial condition, results of operations and prospects. Further, since our Company has recently is converted into a public limited and consequently has undergone a name change, it is in the process of getting such name updated in all our licenses, approvals and certifications.

Further, some of our permits, licenses and approvals are subject to several conditions and we cannot provide any assurance that we will be able to continuously meet such conditions or be able to prove compliance with such conditions to the statutory authorities, which may lead to the cancellation, revocation or suspension of relevant permits, licenses or approvals which may result in the interruption of our operations and may have a material adverse effect on our business, financial condition, cash flows and results of operations. If we fail to comply with all applicable regulations or if the regulations governing our business or their implementation change, we may incur increased costs, be subject to penalties or suffer a disruption in our business activities, any of which could adversely affect our results of operations.

For further details regarding, see “Government and Other Statutory Approvals” on page 162 of this Prospectus.

3. If we are not able to obtain, renew or maintain the statutory and regulatory permits and approvals required to operate our business it may We may face resistance to change from existing users of conventional fossil fuel.

We may face resistance from existing users of traditional conventional fuel to switch to bio-fuel, as such switching may require them to make certain changes to their existing fuel feeding equipment such as furnace, stove etc. and other operating patterns and convenience. This could be perceived as a considerable factor for the users on the grounds of costs, man-power adaptability and training. The management, however, believes that the switching from traditional conventional fossil fuel to bio-fuel might not involve any considerable change except minor change in certain basic equipment. In view of our management, the existing customers who have switched to bio-fuel could make it swiftly without any reportable inconvenience. The benefits of bio-fuel are far more than some basic adaptation challenges.

For further details of our Business, please refer to chapter titled “Business Overview” beginning on page 96 of this Prospectus.

4. Our production is based on competitive bidding process by government authorities/bodies. We may not be able to qualify for, compete and win future projects, which could adversely affect our business and results of operations.

In spite of being a L1 category manufacturers, we receive orders following competitive bidding processes and satisfaction of prescribed qualification criteria. We bid for selective government tenders where we see value and long-term growth prospects. In tenders where we have the technical and financial qualifications to bid for the projects their other criteria for considerations in the authority’s decision like: service quality, technological capacity and performance, health and safety records and personnel, as well as reputation and experience. There can be no assurance that we would be able to meet the qualification criteria, particularly for larger projects. We spend considerable time and resources in the preparation and submission of bids. We cannot assure you that we would bid where we have been prequalified to submit a bid or that our bids, when submitted would be accepted.

In addition, the government conducted tender processes may be subject to change in qualification criteria, unexpected delays and uncertainties. There can be no assurance that the projects for which we bid will be tendered within a reasonable time or will ever be tendered. In the event that new projects which have been announced and which we plan to bid for are not put up for tender within the announced timeframe, or qualification criteria are modified such that we are unable to qualify, our business, prospects, financial condition, cash flows and results of operations could be materially and adversely affected. We are not in a position to predict whether and when we will be awarded a new contract. Our future results of operations and cash flows can fluctuate materially depending on the timing of contract awards.

5. The availability, quality and timely delivery of raw material is an important factor for our business, any fluctuation, delay or increase in cost in same may affect our business and prices.

Our basic raw material is threefold (a) Various Non-edible Vegetable Oil, (b) Non-edible oil (c) Used Cooking Oil and (d) Methanol etc. We procure these materials from our suppliers. Since, we do not have exclusive agreement with any suppliers, any failure of our suppliers to deliver wastes in the necessary quantities or to adhere to delivery schedules would adversely affect our production processes and our ability to deliver orders on time and at the desired level of quality. Any material shortage or interruption in the supply of raw material due to natural causes or other factors could impact production, which in turn would have a material adverse effect on our growth and operations. Further, increase in prices of raw material shall lead to an increase in cost of production, thereby increasing the price of our final product. This would have an adverse impact on our business, financial conditions and results of operations.

For further details of our raw material, please refer to chapter titled “Business Overview” beginning on page 96 of this Prospectus.

6. Our financial performance is dependent primarily on the sale of Biodiesel.

We derive significant portion of our revenue from sale of Biodiesel as accounted for 80.93%, 86.51%, 80.93% and 89.80% of our revenue from operations in Fiscal 2022, 2023 and 2024 and for period ended July 31, 2024 respectively. An inability to anticipate and adapt to evolving consumer preferences and demand for particular products, or ensure product quality may adversely impact demand for our products and consequently our business, results of operations, financial condition and cash flows”.

We derive substantial revenue from the sale of Biodiesel.

Any decrease in demand for Biodiesel can have an adverse impact on our business, results of operations, financial conditions and cash flows. Further, any disruption in the supply chain for the Biodiesel, such as delays in delivery or quality issues, may impact our ability to meet customer

demand and result in loss of sales. While there has not been any instance of any disruption in the supply chain of Biodiesel in the last three Fiscals, we cannot assure you that such instance will not arise in the future.

7. Absence of entry barriers into bio-fuel production may attract many players from both organized and unorganized sectors which will escalate competition and resultant price pressure on the products.

There are no entry barriers for setting up bio-fuel production unit(s). Plant and machinery required for setting up a bio-fuel unit could be easily made and installed at low cost and less time. Further, in order to promote bio-fuel culture in our country, the Government provides various incentives and exemptions to companies engaged in this business. Thus, due to such exemptions, incentives and low entry barriers, many players from the organized as well as the un-organized sector may enter this industry. The entry of these players may result in competition and resultant price pressure on the products. The management, however, believes that setting up of a sustainable bio-fuel unit is dependent on several factors which are the cornerstones of the Company's business model including critical factors as promoter hands-on experience and ground-level understanding of the minute details such as variants of wastes as raw materials, moisture contents, mixture of different variants, etc.

For further details of our Business, please refer to chapter titled "Business Overview" beginning on page 96 of this Prospectus.

8. Our top ten customers contribute majority of our revenues from operations. Any loss of business from one or more of them may adversely affect our revenues and profitability.

Our top ten customers have contributed 79.64%, 89.72%, 85.98% and 100% of our revenues for the financial year ended on 2021-22, 2022-23, 2023-24 and for period ended July 31, 2024 based on Restated Financial Statements. We derive our major part of revenue from Government PSUs through a tender based process. However, our top customers may vary from period to period depending on the demand and thus the composition and revenue generated from these customers might change as we continue to add new customers in normal course of business. Since our business is concentrated among relatively few significant customers, we could experience a reduction in our results of operations, cash flows and liquidity if we lose one or more of these customers or the amount of business we obtain from them is reduced for any reason, including but not limited on account of any dispute or disqualification.

Accordingly, we cannot assure you that the customers which contribute to the major part of our revenue stream will pay us the amounts due to us on time, or at all. In the event any of our significant customers fail to fulfil their respective obligations, our business, financial condition and results of operations would be adversely affected. While we believe we have maintained good and long-term relationships with our customers, there can be no assurance that we will continue to have such long term relationship with them. We cannot assure that we shall generate the same quantum of business, or any business at all, from these customers, and loss of business from one or more of them may adversely affect our revenues and profitability.

9. Our top ten suppliers contribute majority of our purchases. Any loss of business with one or more of them may adversely affect our business operations and profitability.

Our top ten suppliers contributed 61.18%, 69.18%, 83.68% and 92.74% of our total purchases for the financial year ended on 2021-22, 2022-23, 2023-24 and for period ended July 31, 2024. However, our top suppliers may vary from period to period depending on the demand-supply mechanism and thus the supply process from these suppliers might change as we continue to seek more cost-effective suppliers in normal course of business. Since our business is concentrated among relatively few significant suppliers, we could experience a reduction in our purchases and business operations if we lose one or more of these suppliers, including but not limited on account of any dispute or disqualification.

While we believe we have maintained good and long-term relationships with our other suppliers too, there can be no assurance that we will continue to have such long term relationship with them. We cannot assure that we shall do the same quantum of business, or any business at all, with these customers, and loss of business with one or more of them may adversely affect our purchases and business operations.

11. Any delay in production at, or shutdown of our manufacturing facilities, could adversely affect our business, results of operations and financial condition.

The success of our manufacturing activities depends on, among other things, the productivity of our workforce, compliance with regulatory requirements and the continued functioning of our manufacturing processes and machinery. There being no past instances of shutdown of our manufacturing facilities , disruptions in our manufacturing activities could delay production or require us to shut down the affected manufacturing facility. Moreover, our products are permitted to be manufactured at our factory that have received specific approvals, and any shut down of such factory will result in us being unable to manufacture such products for the duration of such shut down. Such an event will result in us being unable to meet with our contractual commitments, which will have an adverse effect on our business, results of operation and financial condition.

Additionally, any interruption at our manufacturing facility, including natural or man-made disasters, workforce disruptions, regulatory approval delays, fire or the failure of machinery, could reduce our ability to meet the demand, which could affect our business prospects, results of operations and financial condition. We have implemented industry acceptable risk management controls at our manufacturing location and continuously seek to upgrade them, the risk of fire or explosion associated with these materials cannot be completely eliminated.

12. We do business with our customers on purchase order basis and do not have long-term contracts with them.

Our business is conducted on purchase order basis, depending on customer requirements for energy generation. We do not have long-term contracts with our customers and there can be no assurance that we will continue to receive repeat orders from any of them. Further, even if we were to continue receiving orders from our customers, there can be no assurance that they will be on the same terms, and the new terms may be less favorable to us than those under the present terms. Our management attempts to ensure customer satisfaction and continuing repeat orders from them endorse our attempts.

For further details of our business, please refer to chapter titled “Business Overview” beginning on page 96 of this Prospectus.

13. Our products are being manufactured from our sole manufacturing facility in Phulera, Rajasthan, India

We manufacture our products from our sole manufacturing facility in Phulera, Rajasthan, India which substantially caters to our domestic demand. Any disruption in the operations due to shortage in supply of power, fire outages, labour problems or industrial accidents at this unit could hamper or delay our ability to continue production. Any disruption or suspension in the production process in this facility can significantly impact our ability to service our customer needs and relation with our customers and have a material adverse effect on our business, revenues, reputation, results of operation and financial condition.

For further details of our business, Please refer chapter titled “Business Overview” beginning on Page 96 of this Prospectus.

14. Information relating to our production capacities and the historical capacity utilization of our production facilities included in this Prospectus is based on factual data and future production and capacity utilization may vary.

Information relating to our production capacities and the historical capacity utilization of our production facilities included in this Prospectus is based on factual data of past years and proposed capacity utilization is based on various assumptions and estimates of our management including on proposed operations, availability and quality of raw materials, operational efficiencies as well as the demand of bio-diesel manufactured by us. Capacity utilization at our manufacturing unit has not always optimal in past.

Actual production levels and utilization rates may differ significantly from the estimated production capacities or capacity utilization information of our facilities. Undue reliance should therefore not be placed on our production capacity or estimated capacity utilization information for our existing facility included in this Prospectus.

15. “Our majority of directors do not have any prior experience of directorship of any listed entity”

Our majority of director do not possess prior experience in listed entity. Also, we have not, historically, been subjected to the increased scrutiny of our affairs by shareholders, regulators and the public at large that is associated with being a listed company. As a listed company, we will incur significant legal, accounting, corporate governance and other expenses that we did not incur as an unlisted company. We will be subject to the listing requirements with the Stock Exchanges and compliances of SEBI (LODR) Regulations with respect to our business and financial condition. If we experience any delays, we may fail to satisfy our reporting obligations and/or we may not be able to readily determine and accordingly report any changes in our results of operations as promptly as other listed companies which may adversely affect the financial position of the Company.

We may need to hire legal and accounting agency to improve technical legal & accounting knowledge of our directors and we cannot assure you that we will be able to do so in a timely manner.

16. Prices of bio-fuel might be more than non-renewable conventional fossil fuel. Moreover, decline in price of fossil fuel may affect the demand for bio-fuel.

Prices of bio-fuel could, at times, be more than non-renewable conventional fossil fuel such as coal. Moreover, bio-fuel are not a substitute of liquid conventional fossil fuel. Further, there remains some risk that the price of fossil fuels such as crude prices, could decline, rendering bio-fuels further non-competitive. Our management believes that the overall cost-benefit should be in favour of bio-fuel considering the renewability of energy and environmental aspects of bio-fuel. Our Company has broad-based production of bio-fuels by making bio-diesel, which is a substitute of liquid conventional fossil fuel. Further, prices of bio-fuel are relatively much cheaper with more efficient output. Besides, bio-fuel could be said to be superior fuel compared to conventional fossil fuels on account of renewability, efficiency and environmental implications.

For further details of our products, please refer to chapter titled “Business Overview” beginning on page 96 of this Prospectus.

17. The property used by the Company for the purpose of its operations is not owned by us. Any termination of the relevant lease or leave and license agreement in connection with such property or our failure to renew the same could adversely affect our operations.

We currently operate from our registered office, located at Jaipuria Mansion Panch Batti, M.I. Road, Jaipur, Rajasthan, India, 302001, and the same is not owned by us. We have obtained this property on leave and license basis from owner through Rent Agreement dated January 08, 2024 starting from the date of agreement for a period of 11 months. The agreement is valid as on the date of filing of this Prospectus. This office is owned by Sanmati Holdings Private Limited and has been acquired by us on a short-term rental basis. Also, the leave and license is not registered with regulatory authority. Any termination of the lease and/or rental deed in connection with this property or our failure to renew the same, and upon favourable conditions, in a timely manner or at all could adversely affect our operations. For details regarding properties taken on lease refer the Section titled —Immoveable Properties under “Business Overview” beginning on page no. 96 of this Prospectus.

Also, the owners of the above property have also leased part of the office to our Group Company. A shared office presents certain issues like lack of privacy and space constraints. If the owners decide to allot bigger space to our Group Company, we may not be able to operate freely and conveniently causing operational hindrances. Also, if the owners decide to rent the entire office to other entities, we may not be able to find a replacement office in a reasonable timeframe, on terms favourable to us or at all.

For further details of our business, Please refer chapter titled “Business Overview” beginning on Page 96 of this Prospectus.

18. We do not have any long-term agreement or contract for supply of raw materials & consequently are exposed to price and supply fluctuations for our raw materials.

We are, to a major extent, dependent on external suppliers for our raw materials requirements and we do not have any long-term supply agreements or commitments in relation to the same or for any other raw materials used in our manufacturing process. In spite of the prices being **derived through set government's policies and no such past instances**, we are exposed to price and supply fluctuations in raw materials, and these fluctuations

may adversely affect our ability to obtain orders and/or to execute them in a timely manner, which would have a material adverse effect on our business, results of operations and financial condition.

In case of non-availability of raw materials on favourable terms we may have to procure the same at the terms and conditions prevalent at that point. This will result in reducing our revenues by a considerable amount due to shortage of raw material or due to inability to procure the same. Further, unfavourable terms of raw materials may also force us to reduce the scale of our operations resulting in a down-sizing of our overall business. We may have to put on hold any expansion plans and our business will be adversely affected.

For details of our raw material, please refer section titled “Business Overview” beginning on Page 96 of this Prospectus.

We may be required to devote management and financial resources in the defence or prosecution of such legal proceedings. Should any new developments arise, including a change in Indian laws or rulings against us by the appellate courts or tribunals, we may face losses and we may have to make further provisions in our financial statements, which could increase our expenses and our liabilities. Decisions in such proceedings, adverse to our interests, may have a material adverse effect on our business, cash flows, financial condition, and results of operations. Failure to successfully defend these or other claims, or if our current provisions prove to be inadequate, our business and results of operations could be adversely affected. Even if we are successful in defending such cases, we will be subject to legal and other costs relating to defending such litigation, and such costs could be substantial. In addition, we cannot assure you that similar proceedings will not be initiated in the future. Any adverse order or direction in these cases by the concerned authorities, even though not quantifiable, may have an adverse effect on our reputation, brand, business, results of operations and financial condition. 20. Our top ten suppliers contribute majority of our purchases. Any loss of business with one or more of them may adversely affect our business operations and profitability.

Our top ten suppliers contributed approximately 98.41% of our total purchases for the period ended July 31, 2024 based on Restated Financial Statements. However, our top suppliers may vary from period to period depending on the demand-supply mechanism and thus the supply process from these suppliers might change as we continue to seek more cost-effective suppliers in normal course of business. Since our business is concentrated among relatively few significant suppliers, we could experience a reduction in our purchases and business operations if we lose one or more of these suppliers, including but not limited on account of any dispute or disqualification.

While we believe we have maintained good and long-term relationships with our other suppliers too, there can be no assurance that we will continue to have such long term relationship with them. We cannot assure that we shall do the same quantum of business, or any business at all, with these customers, and loss of business with one or more of them may adversely affect our purchases and business operations.

21. The COVID-19 pandemic, or any future pandemic or widespread public health emergency, could materially and adversely impact our business, financial condition, cash flows and results of operations.

Since first being reported in December 2019, the outbreak of COVID-19 has spread globally. The World Health Organization declared the outbreak of COVID-19 to be a public health emergency of international concern in January 2020, and a global pandemic in March 2020.

The COVID-19 pandemic has had, and any future pandemic or widespread public health emergency could have, repercussions across regional and global economies and financial markets. The outbreak of COVID-19 in many countries, including India has significantly and adversely impacted economic activity and has contributed to significant volatility and negative pressure in financial markets, and it is possible that the outbreak of COVID-19 will cause a prolonged global economic crisis, recession or depression, despite monetary and fiscal interventions by governments.

The global impact of the outbreak has been rapidly evolving. Most of the jurisdictions, including where we have business operation, have reacted by instituting restrictive measures including invoking lock-downs and quarantines, requiring the closure of non-essential businesses and placing restrictions on the types of businesses.

The full extent to which the COVID-19 pandemic, or any future pandemic or widespread public health emergency impacts our business, operations and financial results will depend on numerous evolving factors that we may not be able to accurately predict, including: the scope, severity, and duration of the pandemic; actions taken by governments, business and individuals in response to the pandemic; disruptions or restrictions on our employees' ability to work and travel; any extended period of remote work arrangements; and strain on our or business continuity plans, and resultant operational risk. The COVID-19 pandemic, or any future pandemic or widespread public health emergency could therefore materially and adversely impact our business, financial condition, cash flows and results of operations.

22. Our failure to adapt to technological developments or industry trends could affect the performance and features of our products, and reduce demand of our customers.

As our operations grow in scope and size, we must continuously improve, upgrade, adapt and expand our systems and infrastructure to offer our customers enhanced products, features and functionality ahead of rapidly evolving customer demands, while maintaining the reliability and integrity of our systems and infrastructure in a cost-efficient and competitive manner. The systems, infrastructure and technologies we currently employ may become obsolete or be unable to support our increased size and scale. Even if we are able to maintain, upgrade or replace our existing systems or innovate or customize and develop new technologies and systems, we may not be as quick or efficient as our competitors in upgrading or replacing our systems. We may be unable to devote adequate financial resources or obtain sufficient financing on commercially acceptable terms in time, or at all, which may have a material adverse effect on our business, prospects, results of operation and financial condition. For further details regarding our business, please refer to chapter titled "Business Overview" beginning on Page 96 of this Prospectus.

23. We have entered into and may enter into related party transactions in the future also.

Our Company in the past has entered into Related Party Transactions on **arm's length basis and in accordance with the provisions of Companies Act, 2013 and amendments thereof** may continue to do so in future also, which may affect our competitive edge. Our Company had entered into various transactions with our Promoter, Promoter Group, Directors, their Relatives and Group Company. **These transactions, inter-alia includes salary, remuneration, loans and advances, and Purchase of Raw material etc. Our Company entered into such transactions due to easy proximity and quick execution.**

However, there is no assurance that we could not have obtained better and more favorable terms than those entered into with such related parties. Our Company may enter into such transactions in future also and we cannot assure that in such an event there would be no adverse effect on results of our operations. For details please refer to Annexure - XXXVII on Related Party Transactions of the Auditor's Report under Section titled "Financial Information of our Company" beginning on page no. 139 of this Prospectus.

24. We have a substantial amount of outstanding indebtedness, which requires significant cash flows to service and are subject to certain conditions and restrictions in terms of our financing arrangements, which restricts our ability to conduct our business and operations in the manner we desire.

As of July 31, 2024, our long-term borrowings were ₹ 826.72 Lacs & short term borrowings were ₹ 1,162.51 Lacs and we will continue to incur additional indebtedness in the future. Our level of indebtedness has important consequences to us, such as:

- increasing our vulnerability to general adverse economic, industry and competitive conditions;
- limiting our ability to borrow additional amounts in the future;
- affecting our capital adequacy requirements; and
- Increasing our finance costs.

In the event we breach any financial or other covenants contained in any of our financing arrangements or in the event we had breached any terms in the past which is noticed in the future, we may be required to immediately repay our borrowings either in whole or in part, together with any related costs. If the lenders of a material amount of the outstanding loans declare an event of default simultaneously, our Company may be unable to pay its debts when they fall due. For further details of our Company's borrowings, Please refer "Financial Information of our Company" on page 139 of this Prospectus.

We have experienced sustainable growth in recent years and expect our businesses to continue to grow significantly. Our future growth is subject to risks arising from a rapid increase in volume, and inability to retain and recruit skilled staff.

Our future growth may place significant demands on our management and operations and require us to continuously evolve and improve our financial, operational and other internal controls within our Company. In particular, continued expansion may pose challenges in:

- maintaining high levels of quality control, cost effective manufacturing, and customer satisfaction;
- recruiting, training and retaining sufficient skilled management and technical personnel for our manufacturing process;

Under the Companies Act, prior to issuance of any new equity shares, a public limited company incorporated under Indian law must offer its equity shareholders pre-emptive rights to subscribe to a proportionate number of equity shares to maintain existing ownership, unless such pre-emptive rights are waived by a special resolution by a three-fourths majority of the equity shareholders voting on such resolution. If you are a foreign investor and the law of the foreign jurisdiction that you are not permit the exercise of such pre-emptive rights without our filing an offering document or registration statement with the applicable authority in such foreign jurisdiction, you will be unable to exercise such pre-emptive rights, unless we make such a filing. If we elect not to file an offering document or a registration statement, the new securities may be issued to a custodian, who may sell the securities for your benefit. The value such custodian receives on the sale of any such securities and the related transaction costs cannot be predicted. To the extent that you are unable to exercise pre-emptive rights granted in respect of our Equity Shares, your proportional interest in our Company would decline.

61. *The Issue Price of our Equity Shares may not be indicative of the market price of our Equity Shares after the Issue and the market price of our Equity Shares may decline below the Issue Price and you may not be able to sell your Equity Shares at or above the Issue Price.*

The Issue Price of our Equity Shares has been determined on the basis of the Book Built Issue. This price is based on numerous factors. For further information, see "Basis for Issue Price" beginning on page 78 of this Prospectus and may not be indicative of the market price of our Equity Shares.

after the Issue. The market price of our Equity Shares could be subject to significant fluctuations after the Issue, and may decline below the Issue Price. We cannot assure you that you will be able to sell your Equity Shares at or above the Issue Price. Among the factors that could affect our share price are:

- Variations in the rate of growth of our financial indicators, such as earnings per share, net income and revenues;
- Changes in revenue or earnings estimates or publication of research reports by analysts;
- Speculation in the press or investment community;
- Domestic and international economic, legal and regulatory factors unrelated to our performance.

62. A third party could be prevented from acquiring control of our Company because of anti-takeover provisions under Indian law.

There are provisions in Indian law that may delay, deter or prevent a future takeover or change in control of our Company, even if a change in control would result in the purchase of your Equity Shares at a premium to the market price or would otherwise be beneficial to you. Such provisions may discourage or prevent certain types of transactions involving actual or threatened change in control of us. Under the takeover regulations in India, an acquirer has been defined as any person who, directly or indirectly, acquires or agrees to acquire shares or voting rights or control over a company, whether individually or acting in concert with others. Although these provisions have been formulated to ensure that interests of investors/shareholders are protected, these provisions may also discourage a third party from attempting to take control of our Company. Consequently, even if a potential takeover of our Company would result in the purchase of the Equity Shares at a premium to their market price or would otherwise be beneficial to its stakeholders, it is possible that such a takeover would not be attempted or consummated because of the Indian takeover regulations. The requirements of being a listed company may strain our resources and distract management.

We have no experience as a listed company and have not been subjected to the increased scrutiny of our affairs by shareholders, regulators and the public that is associated with being a listed company. As a listed company, we will incur additional legal, accounting, corporate governance and other expenses that we did not incur as an unlisted company. We will be subject to the listing agreements with the Stock Exchanges and compliances of SEBI Listing Regulation, 2015 which would require us to file audited annual and unaudited semi-annual and limited review reports with respect to our business and financial condition. If we delay making such filings, we may fail to satisfy our reporting obligations and/or we may not be able to readily determine and accordingly report any changes in our results of operations as timely as other listed companies.

As a listed company, we will need to maintain and improve the effectiveness of our disclosure controls and procedures and internal control over financial reporting, including keeping adequate records of daily transactions to support the existence of effective disclosure controls and procedures, internal control over financial reporting and additional compliance requirements under the Companies Act, 2013. In order to maintain and improve the effectiveness of our disclosure controls and procedures and internal control over financial reporting, significant resources and management oversight will be required. As a result, management's attention may be diverted from other business concerns, which could adversely affect our business, prospects, financial condition and results of operations. In addition, we may need to hire additional legal and accounting staff with appropriate listed company experience and technical accounting knowledge and we cannot assure you that we will be able to do so in a timely manner.

63. We may require further equity issuance, which will lead to dilution of equity and may affect the market price of our Equity Shares or additional funds through incurring debt to satisfy our capital needs, which we may not be able to procure and any future equity offerings by us.

Our growth is dependent on having a balance sheet to support our activities. In addition to the IPO Proceeds and our internally generated cash flow, we may need other sources of financing to meet our capital needs which may include entering into new debt facilities with lending institutions or raising additional equity in the capital markets. We may need to raise additional capital from time to time, dependent on business conditions. The factors that would require us to raise additional capital could be business growth beyond what the current balance sheet can sustain; additional capital requirements imposed due to changes in regulatory regime or significant depletion in our existing capital base due to unusual operating losses. Any fresh issue of shares or convertible securities would dilute existing holders, and such issuance may not be done at terms and conditions, which are favourable to the existing shareholders of our Company. If our Company decides to raise additional funds through the incurrence of debt, our interest obligations will increase, and we may be subject to additional covenants, which could further limit our ability to access cash flows from our operations. Such financings could cause our debt-to-equity ratio to increase or require us to create charges or liens on our assets in favour of lenders. We cannot assure you that we will be able to secure adequate financing in the future on acceptable terms, in time, or at all. Our failure to obtain sufficient financing could result in the delay or abandonment of our expansion plans. Our business and future results of operations may be affected if we are unable to implement our expansion strategy.

Any future issuance of Equity Shares by our Company may dilute shareholding of investors in our Company; and hence affect the trading price of our Company's Equity Shares and its ability to raise capital through an issue of its securities. In addition, any perception by investors that such issuances or sales might occur could also affect the trading price of our Company's Equity Shares. Additionally, the disposal, pledge or encumbrance of Equity Shares by any of our Company's major shareholders, or the perception that such transactions may occur may affect the trading price of the Equity Shares. No assurance may be given that our Company will not issue Equity Shares or that such shareholders will not dispose of, pledge or encumber their Equity Shares in the future.

EXTERNAL RISK FACTORS

64. The occurrence of natural or man-made disasters could adversely affect our results of operations, cash flows and financial condition. Hostilities, terrorist attacks, civil unrest and other acts of violence could adversely affect the financial markets and our business.

The occurrence of natural disasters, including cyclones, storms, floods, earthquakes, tsunamis, tornadoes, fires, explosions, pandemic disease and man-made disasters, including acts of terrorism and military actions, could adversely affect our results of operations, cash flows or financial condition. Terrorist attacks and other acts of violence or war in India or globally may adversely affect the Indian securities markets. In addition, any deterioration in international relations, especially between India and its neighbouring countries, may result in investor concern regarding regional

stability which could adversely affect the price of the Equity Shares. In addition, India has witnessed local civil disturbances in recent years and it is possible that future civil unrest as well as other adverse social, economic or political events in India could have an adverse effect on our business. Such incidents could also create a greater perception that investment in Indian companies involves a higher degree of risk and could have an adverse effect on our business and the market price of the Equity Shares.

65. Our business and activities may be further regulated by the Competition Act and any adverse application or interpretation of the Competition Act could materially and adversely affect our business, financial condition and results of operations.

The Competition Act seeks to prevent business practices that have or are likely to have an appreciable adverse effect on competition in India and has established the Competition Commission of India (the “CCI”). Under the Competition Act, any arrangement, understanding or action, whether formal or informal, which has or is likely to have an appreciable adverse effect on competition is void and attracts substantial penalties. Any agreement among competitors which, directly or indirectly, determines purchase or sale prices, results in bid rigging or collusive bidding, limits or controls the production, supply or distribution of goods and services, or shares the market or source of production or providing of services by way of allocation of geographical area or type of goods or services or number of customers in the relevant market or in any other similar way, is presumed to have an appreciable adverse effect on competition and shall be void. Further, the Competition Act prohibits the abuse of a dominant position by any enterprise. If it is proven that a breach of the Competition Act committed by a company took place with the consent or connivance or is attributable to any neglect on the part of, any director, manager, secretary or other officer of such company, that person shall be guilty of the breach themselves and may be punished as an individual. If we, or any of our employees are penalized under the Competition Act, our business may be adversely affected. Further, the Competition Act also regulates combinations and requires approval of the CCI for effecting any acquisition of shares, voting rights, assets or control or mergers or amalgamations above the prescribed asset and turnover based thresholds.

On March 4, 2011, the Government of India notified and brought into force new provisions under the Competition Act in relation to combined entities (the “Combination Regulation Provisions”), which came into effect from June 1, 2011. The Combination Regulation Provisions require that any acquisition of shares, voting rights, assets or control or mergers or amalgamations, which cross the prescribed asset and turnover based thresholds, must be notified to and preapproved by the CCI. In addition, on May 11, 2011, the CCI issued the final Competition Commission of India (Procedure in regard to the transaction of business relating to combinations) Regulations, 2011 (as amended). These regulations, as amended, set out the mechanism for the implementation of the Combination Regulation Provisions under the Competition Act.

66. The Indian tax regime is currently undergoing substantial changes which could adversely affect our business.

The goods and service tax (“GST”) that has been implemented with effect from July 1, 2017 combines taxes and levies by the GoI and state governments into a unified rate structure, and replaces indirect taxes on goods and services such as central excise duty, service tax, customs duty, central sales tax, state VAT, cess and surcharge and excise that were being collected by the GoI and state governments.

As regards the General Anti-Avoidance Rules (“GAAR”), the general anti avoidance rules (“GAAR”) provisions have been made effective from assessment year 2018-19 onwards, i.e.; financial Year 2017-18. The GAAR provisions intend to declare an arrangement as an “impermissible avoidance arrangement”, if the main purpose or one of the main purposes of such arrangements is to obtain a tax benefit, and satisfies at least one of the following tests (i) creates rights, or obligations, which are not ordinarily created between persons dealing at arm’s length; (ii) results, directly or indirectly, in misuse, or abuse, of the provisions of the Income Tax Act, 1961; (iii) lacks commercial substance or is deemed to lack commercial substance, in whole or in part; or (iv) is entered into, or carried out, by means, or in a manner, that is not ordinarily engaged for bona fide purposes. If GAAR provisions are invoked, the tax authorities will have wider powers, including denial of tax benefit or a benefit under a tax treaty. In the absence of any precedents on the subject, the application of these provisions is uncertain. As the taxation regime in India is undergoing a significant overhaul, its consequent effects on economy cannot be determined at present and there can be no assurance that such effects would not adversely affect our business, future financial performance and the trading price of the Equity Shares.

67. Political, economic or other factors that are beyond our control may have an adverse effect on our business, results of operations and cash flows.

We currently operate only in India and are dependent on domestic, regional and market conditions. Our performance, growth and market price of our Equity Shares are and will be dependent on our industry of the Indian economy. There have been periods of slowdown in the economic growth of India. For instance, the situation of lock-down is prevailing in India due to pandemic Covid-19 spread in India and all other parts of world. If such condition prevails for longer time the Demand for our products may be adversely affected by an economic downturn in domestic, regional and global economies. India’s economic growth is also affected by various other factors including domestic consumption and savings, balance of trade movements, namely export demand and movements in key imports, global economic uncertainty and liquidity crisis, volatility in exchange currency rates. Consequently, any future slowdown in the Indian economy could harm our business, results of operations, cash flows and financial condition. Also, a change in the Government or a change in the economic and deregulation policies could affect economic conditions prevalent in the areas in which we operate in general and our business in particular and high rates of inflation in India could increase our costs without proportionately increasing our revenues, and as such decrease our operating margins.

68. Companies in India are required to prepare financial statements under the new Indian Accounting Standards. In addition, all income-tax assessee in India will be required to follow the Income Computation and Disclosure Standards.

The Ministry of Corporate Affairs (“MCA”), Government of India, has through notification dated February 16, 2015 issued the Indian Accounting Standards Rules, 2015 (“Ind AS”) which have come into effect from April 1, 2015 and are applicable to companies which fulfill certain conditions. Further, there can be no assurance that the adoption of Ind AS will not affect our reported results of operations or financial condition. Any of these factors relating to the use of Ind AS may adversely affect our financial condition and results of operations.

Further, the Ministry of Finance, Government of India has issued a notification dated September 29, 2016 notifying Income Computation and Disclosure Standards (“ICDS”), thereby creating a new framework for computation of taxable income. The ICDS shall apply from the assessment year 2017-2018 and subsequent years. The adoption of ICDS is expected to significantly alter the way companies compute their taxable income, as ICDS

deviates from several concepts that are followed under general accounting standards, including Indian GAAP and Ind AS. In addition, ICDS shall be applicable for the computation of income for tax purposes but shall not be applicable for the computation of income for minimum alternate tax. There can be no assurance that the adoption of ICDS will not adversely affect our business, results of operations and financial condition.

69. Significant differences exist between Indian GAAP and other accounting principles, such as U.S. GAAP and IFRS, which investors may be more familiar with and may consider material to their assessment of our financial condition.

Our financial statements are prepared and presented in conformity with Indian GAAP. No attempt has been made to reconcile any of the information given in this document to any other principles or to base it on any other standards. Indian GAAP differs in certain significant respects from IFRS, U.S. GAAP and other accounting principles with which prospective investors may be familiar in other countries. If our financial statements were to be prepared in accordance with such other accounting principles, our results of operations, cash flows and financial position may be substantially different. Prospective investors should review the accounting policies applied in the preparation of our financial statements, and consult their own professional advisers for an understanding of the differences between these accounting principles and those with which they may be more familiar.

70. Our business is substantially affected by prevailing economic, political and other prevailing conditions in India.

Our Company is incorporated in India, and the majority of our assets and employees are located in India. As a result, we are highly dependent on prevailing economic conditions in India and our results of operations are significantly affected by factors influencing the Indian economy. Factors that may adversely affect the Indian economy, and hence our results of operations, may include:

- the macroeconomic climate, including any increase in Indian interest rates or inflation;
 - any exchange rate fluctuations, the imposition of currency controls and restrictions on the right to convert or repatriate currency or export assets;
 - Any scarcity of credit or other financing in India, resulting in an adverse impact on economic conditions in India and scarcity of financing for our expansions;
 - Prevailing income conditions among Indian consumers and Indian corporations;
 - volatility in, and actual or perceived trends in trading activity on, India's principal stock exchanges;
 - changes in India's tax, trade, fiscal or monetary policies;
 - political instability, terrorism or military conflict in India or in countries in the region or globally, including in India's various neighboring countries;
 - occurrence of natural or man-made disasters;
 - prevailing regional or global economic conditions, including in India's principal markets;
 - other significant regulatory or economic developments in or affecting India or its ER&D sector;
- international business practices that may conflict with other customs or legal requirements to which we are subject, including anti-bribery and anti-corruption laws;

71. Financial instability, economic developments and volatility in securities markets in other countries may also cause the price of the Equity Shares to decline.

The Indian market and the Indian economy are influenced by economic and market conditions in other countries, particularly emerging Asian market countries. Financial turmoil in Europe and elsewhere in the world in recent years has affected the Indian economy. In recent times, the Indian financial markets had been negatively affected by the volatility in global financial market, including on account of certain European nations' debt troubles and move to break away by the United Kingdom from the European Union. Although, economic conditions are different in each country, investors' reactions to developments in one country can have adverse effects on the securities of companies in other countries, including India. Currencies of a few Asian countries have in the past suffered depreciation against the U.S. Dollar owing to, amongst other, the announcements by the U.S. government that it may consider reducing its quantitative easing measures. A loss of investor confidence in the financial systems of other emerging markets may cause increased volatility in Indian financial markets and, indirectly, in the Indian economy in general. Any worldwide financial instability could also have a negative impact on the Indian economy. Financial disruptions may occur and could harm our business, future financial performance and the prices of the Equity Shares.

The global credit and equity markets have experienced substantial dislocations, liquidity disruptions and market corrections in recent years. Liquidity and credit concerns and volatility in the global credit and financial markets have increased significantly with the bankruptcy or acquisition of, and government assistance extended to, several major U.S. and European financial institutions. These and other related events, such as the European sovereign debt crisis, have had a significant impact on the global credit and financial markets as a whole, including reduced liquidity, greater volatility, widening of credit spreads and a lack of price transparency in global credit and financial markets. In response to such developments, legislators and financial regulators in the United States and other jurisdictions, including India, have implemented a number of policy measures designed to add stability to the financial markets.

However, the overall impact of these and other legislative and regulatory efforts on the global financial markets is uncertain, and they may not have the intended stabilizing effects. In the event that the current difficult conditions in the global credit markets continue or if there is any significant financial disruption, such conditions could have an adverse effect on our business, future financial performance and the trading price of the Equity Shares.

72. A significant change in the Government of India's economic liberalization and deregulation policies could adversely affect our business and the price of our Equity Shares.

The Government of India has traditionally exercised, and continues to exercise, a dominant influence over many aspects of the economy. Unfavourable government policies including those relating to bio fuels policies, could adversely affect business and economic conditions in India, and could also affect our ability to implement our strategy and our future financial performance. Since 1991, successive governments, including

coalition governments, have pursued policies of economic liberalization, including significantly relaxing restrictions on the private sector and encouraging the development of the Indian financial sector. However, the members of the Government of India and the composition of the coalition in power are subject to change. As a result, it is difficult to predict the economic policies that will be pursued by the Government of India. For example, there may be an increasing number of laws and regulations pertaining to the industry we operate. The rate of economic liberalization could change and specific laws and policies affecting our industry, foreign investment, currency exchange and other matters affecting investment in our securities could change as well. Any significant change in India's economic liberalization and deregulation policies could adversely affect business and economic conditions in India generally and our business in particular.

Illustration of the Book Building and Price Discovery Process: Bidders should note that this example is solely for illustrative purposes and is not specific to the Issue. Bidders can bid at any price within the Price Band. For instance, assume a Price Band of ₹20 to ₹ 24 per share, Issue size of 3,000 Equity Shares and receipt of five Bids from Bidders, details of which are shown in the table below. The illustrative book given below shows the demand for the Equity Shares of the Issuer at various prices and is collated from Bids received from various investors.

Bid Quantity	Bid Amount (₹)	Cumulative Quantity	Subscription
500	24	500	16.67%
1,000	23	1,500	50.00%
1,500	22	3,000	100.00%
2,000	21	5,000	166.67%
2,500	20	7,500	250.00%

The price discovery is a function of demand at various prices. The highest price at which the Issuer is able to Issue the desired number of Equity Shares is the price at which the book cuts off, i.e., ₹ 22.00 in the above example. The Company in consultation with the BRLM, may finalise the Issue Price at or below such Cut-Off Price, i.e., at or below ₹ 22.00. The table below sets forth the details of holding levels (in days) as of and for the period ended July 31, 2024 and financial years ended March 31, 2024, 2023 and 2021 on the basis of Restated Financial Statement, the provisional holding levels (in days) for Fiscal 2024 and estimated holding levels (in days) for the Fiscal 2025:

Particulars	Holding levels				
	Fiscal 2022 (Restated)	Fiscal 2023 (Restated)	Fiscal 2024 (Restated)	Period ended July 31 ,2024 (Restated)	Fiscal 2025 (Provisional)

Inventories	40	78	68	87	53
Trade Receivables	22	34	49	74	53
Trade Payables	10	16	10	11	10

The table below sets forth the key justifications for holding levels:

S. No.	Particulars	Details
Current assets		
1.	Trade receivables	The gradual increase in inventory holding days throughout fiscal years 2022, 2023, 2024 and the July 2024 period measuring at 40, 78, 68 and 87 days, respectively can be attributed closely to the significant growth in the company's sales volume. Consequently, as sales expanded, the company likely found itself accumulating higher inventory levels to meet the growing demand from customers. However, looking ahead to fiscal years 2025, there are optimistic projections indicating a notable decrease in inventory holding days, with estimates 53 days. This anticipated reduction in inventory holding days presents a positive outlook for the company's operational efficiency and financial performance. The projected decrease in inventory holding days for fiscal years 2025 can be attributed to strategic adjustments in the

S. No.	Particulars	Details
		management of trade receivables and trade payables. With a more streamlined approach to these areas, the company aims to optimize its working capital utilization and enhance its liquidity position.
2.	Inventories	The fluctuations in trade receivable days reflect shifts in project timelines, client payment behaviours, and strategic financial management, it is showing trade receivables holding days of 22, 34, 49 and 74 from FY 2021-22 to period ended July 31, 2024. The increase in our trade receivable holding period from 22 days in FY 2022 to 34 days in FY 2023, 49 days in FY 2024 to 74 days for the period months ended July 31, 2024, and the projected 53 days for FY 2025, can be attributed to intensified competition and evolving market factors. To stay competitive and attract a broader client base, we have extended credit terms and introduced more flexible payment options, which has led to longer collection periods. Additionally, fluctuations in market demand and economic uncertainty have impacted client payment behaviours, contributing to slower receivables turnover. These adjustments, while temporarily affecting our holding period, are strategic moves to enhance market positioning and client relationships.
Current liabilities		
1.	Trade payables	The changes in our trade payable holding period reflect our strategic approach to vendor relationships. In FY 2022, we reduced the holding period to 10 days, emphasizing our commitment to prompt payments, which strengthened our relationships with vendors and secured favorable terms. FY 2023 saw a slight increase to 16 days due to temporary adjustments in cash flow management and increased operational expenditures. However, recognizing the value of maintaining strong vendor relations, we decreased the holding period back to 10 days for FY 2024 and maintained it at 11 days for the period ending July 31, 2024, and plan to further maintain it at 10 days for FY 2025. This consistent approach to faster payments enhances vendor goodwill, improves supply chain reliability, and supports our competitive position in the biodiesel industry.

GLOBAL ECONOMY OUTLOOK

The baseline forecast is for the world economy to continue growing at 3.2 percent during 2024 and 2025, at the same pace as in 2023. A slight acceleration for advanced economies—where growth is expected to rise from 1.6 percent in 2023 to 1.7 percent in 2024 and 1.8 percent in 2025—will be offset by a modest slowdown in emerging market and developing economies from 4.3 percent in 2023 to 4.2 percent in both 2024 and 2025. The forecast for global growth five years from now—at 3.1 percent—is at its lowest in decades. Global inflation is forecast to decline steadily, from 6.8 percent in 2023 to 5.9 percent in 2024 and 4.5 percent in 2025, with advanced economies returning to their inflation targets sooner than emerging market and developing economies. Core inflation is generally projected to decline more gradually.

The global economy has been surprisingly resilient, despite significant central bank interest rate hikes to restore price stability. Chapter 2 explains that changes in mortgage and housing markets over the prepandemic decade of low interest rates moderated the near-term impact of policy rate hikes. Chapter 3 focuses on medium-term prospects and shows that the lower predicted growth in output per person stems, notably, from persistent structural frictions preventing capital and labor from moving to productive firms. Chapter 4 further indicates how dimmer prospects for growth in China and other large emerging market economies will weigh on trading partners.

The global economy remains remarkably resilient, with growth holding steady as inflation returns to target. The journey has been eventful,

starting with supply-chain disruptions in the aftermath of the pandemic, a Russian-initiated war on Ukraine that triggered a global energy and food crisis, and a considerable surge in inflation, followed by a globally synchronized monetary policy tightening.

Yet, despite many gloomy predictions, the world avoided a recession, the banking system proved largely resilient, and major emerging market economies did not suffer sudden stops. Moreover, the inflation surge—despite its severity and the associated cost-of-living crisis—did not trigger uncontrolled wage-price spirals (see October 2022 World Economic Outlook). Instead, almost as quickly as global inflation went up, it has been coming down. On a year-over-year basis, global growth bottomed out at the end of 2022, at 2.3 percent, shortly after median headline inflation peaked at 9.4 percent.

According to our latest projections, growth for 2024 and 2025 will hold steady around 3.2 percent, with median headline inflation declining from 2.8 percent at the end of 2024 to 2.4 percent at the end of 2025. Most indicators point to a soft landing. Markets reacted exuberantly to the prospect of central banks exiting from tight monetary policy. Financial conditions eased, equity valuations soared, capital flows to most emerging market economies excluding China have been buoyant, and some low-income countries and frontier economies regained market access (see the April 2024 Global Financial Stability Report).

Even more encouraging, we now estimate that there will be less economic scarring from the pandemic—the projected drop in output relative to prepandemic projections—for most countries and regions, especially for emerging market economies, thanks in part to robust employment growth. Astonishingly, the US economy has already surged past its prepandemic trend.

First, while inflation trends are encouraging, we are not there yet. Somewhat worryingly, the most recent median headline and core inflation numbers are pushing upward. This could be temporary, but there are reasons to remain vigilant. Most of the progress on inflation came from the decline in energy prices and goods inflation below its historical average. The latter has been helped by easing supply-chain frictions, as well as by the decline in Chinese export prices. But services inflation remains high—sometimes stubbornly so—and could derail the disinflation path. Bringing inflation down to target remains the priority.

Second, the global view can mask stark divergence across countries. The exceptional recent performance of the United States is certainly impressive and a major driver of global growth, but it reflects strong demand factors as well, including a fiscal stance that is out of line with long-term fiscal sustainability (see April 2024 Fiscal Monitor). This raises short-term risks to the disinflation process, as well as longer-term fiscal and financial stability risks for the global economy since it risks pushing up global funding costs. Something will have to give. In the euro area, growth will pick up this year, but from very low levels, as the trailing effects of tight.

Third, even as inflation recedes, real interest rates have increased, and sovereign debt dynamics have become less favorable in particular for highly indebted emerging markets. Countries should turn their sights toward rebuilding fiscal buffers. Credible fiscal consolidations help lower funding costs and improve financial stability. In a world with more frequent adverse supply shocks and growing fiscal needs for safety nets, climate adaptation, digital transformation, energy security, and defense, this should be a policy priority. Yet this is never easy, as the April 2023 World Economic Outlook documented: fiscal consolidations are more likely to succeed when credible and when implemented while the economy is growing, rather than when markets dictate their conditions. In countries where inflation is under control, and that engage in a credible multiyear effort to rebuild fiscal buffers, monetary policy can help support activity. The successful 1993 US fiscal consolidation and monetary accommodation episode comes to mind as an example to emulate.

Fourth, medium-term growth prospects remain historically weak. Chapter 3 of this report takes an in-depth dive into the different drivers of the slowdown. The main culprit is lower total factor productivity growth. A significant part of the decline comes from increased misallocation of capital and labor within sectors and countries. Facilitating faster and more efficient resource allocation can help boost growth. Much hope rests on artificial intelligence (AI) delivering strong productivity gains in the medium term. It may do so, but the potential for serious disruptions in labor and financial markets is high. Harnessing the potential of AI for all will require that countries improve their digital infrastructure, invest in human capital, and coordinate on global rules of the road. Medium-term growth prospects are also harmed by rising geoeconomic fragmentation and the surge in trade restrictive and industrial policy measures since 2019. Global trade linkages are already changing as a result, with potential losses in efficiency. But the broader damage is to global cooperation and multilateralism.

Finally, huge global investments are needed for a green and climate-resilient future. Cutting emissions is compatible with growth, as is seen in recent decades during which growth has become much less emissions intensive. Nevertheless, emissions are still rising. A lot more needs to be done and done quickly. Green investment has expanded at a healthy pace in advanced economies and China. Cutting harmful fossil fuel subsidies can help create the necessary fiscal room for further green investments. The greatest effort must be made by other emerging market and developing economies, which need to massively increase their green investment growth and reduce their fossil fuel investment. This will require technology transfer by other advanced economies and China, as well as substantial financing, much of it from the private sector, but some of it concessional.

(Source: <https://www.imf.org/en/Publications/WEO/Issues/2024/04/16/world-economic-outlook-april-2024>)

Global activity has proved surprisingly resilient:

Global growth in 2023 continued at an annual rate above 3%, despite the drag exerted by tighter financial conditions and other adverse factors, including Russia's war of aggression against Ukraine and the evolving conflict in the Middle East. Global GDP growth is projected at 3.1% in 2024 and 3.2% in 2025, little changed from the 3.1% in 2023. This is weaker than seen in the decade before the global financial crisis, but close to currently estimated potential growth rates in both advanced and emerging market economies.

Headline inflation in the OECD is projected to gradually ease from 6.9% in 2023 to 5.0% in 2024 and 3.4% in 2025, helped by tight monetary

%, year-on-year

policy and fading goods and energy price pressures. By the end of 2025, inflation is expected to be back on central bank targets in most major economies.

GDP growth in the United States is projected to be 2.6% in 2024, before slowing to 1.8% in 2025 as the economy adapts to high borrowing costs and moderating domestic demand. In the euro area, which stagnated in the fourth quarter of 2023, a recovery in real household incomes, tight labour markets and reductions in policy interest rates will help generate a gradual rebound. Euro area GDP growth is projected at 0.7% in 2024 and 1.5% in 2025.

Growth in Japan should recover steadily, with domestic demand underpinned by stronger real wage growth, continued accommodative monetary policy and temporary tax cuts. GDP is projected to expand by 0.5% in 2024 and 1.1% in 2025.

China is expected to slow moderately, with GDP growth of 4.9% in 2024 and 4.5% in 2025, as the economy is supported by fiscal stimulus and exports.

“The global economy has proved resilient, inflation has declined within sight of central bank targets, and risks to the outlook are becoming more balanced. We expect steady global growth for 2024 and 2025, though growth is projected to remain below its longer-run average,” **OECD Secretary-General Mathias Cormann** said. “Policy action needs to ensure macroeconomic stability and improve medium-term growth prospects. Monetary policy should remain prudent, with scope to lower policy interest rates as inflation declines, fiscal policy needs to address rising pressures to debt sustainability, and policy reforms should boost innovation, investment and opportunities in the labour market particularly for women, young people and older workers.”

Significant uncertainty remains. Inflation may stay higher for longer, resulting in slower-than-expected reductions in policy interest rates and leading to further financial vulnerabilities. Growth could disappoint in China, due to the persistent weakness in property markets or smaller-than-anticipated fiscal support over the next two years. High geopolitical tensions remain a significant near-term risk to activity and inflation, particularly if the evolving conflict in the Middle East and attacks in the Red Sea were to widen or escalate. On the upside, demand growth could prove stronger than expected, if households and firms were to draw more fully on the savings accumulated during COVID-19.

Against this backdrop, the Outlook lays out a series of policy recommendations, highlighting the need to ensure a durable reduction in inflation, establish a budgetary path that will address rising fiscal pressures and undertake reforms that improve prospects for medium-term growth.

Monetary policy needs to remain prudent, to ensure that inflationary pressures are durably contained. Scope exists to lower policy interest rates as inflation declines, but the policy stance should remain restrictive in most major economies for some time to come.

Governments face rising fiscal challenges given high debt levels and sizeable additional spending pressures from population ageing, and climate adaptation and mitigation. Future debt burdens are likely to rise significantly if no action is taken, highlighting the need for stronger near-term efforts to contain spending growth, improve public spending efficiency, reallocate spending to areas that better support opportunities and growth, and optimise tax revenues.

“The foundations for future output and productivity growth need to be strengthened by ambitious structural policy reforms to improve human capital and take advantage of technological advances,” OECD Chief Economist Clare Lombardelli said.

INDIAN ECONOMY OUTLOOK

Introduction

Strong economic growth in the first quarter of FY23 helped India overcome the UK to become the fifth-largest economy after it recovered from the COVID-19 pandemic shock. Nominal GDP or GDP at Current Prices in the year 2023-24 is estimated at Rs. 293.90 lakh crores (US\$ 3.52 trillion), against the First Revised Estimates (FRE) of GDP for the year 2022-23 of Rs. 269.50 lakh crores (US\$ 3.23 trillion). The growth in nominal GDP during 2023-24 is estimated at 9.1% as compared to 14.2% in 2022-23. Strong domestic demand for consumption and investment, along with Government's continued emphasis on capital expenditure are seen as among the key driver of the GDP in the first half of FY24. During the period January-March 2024, India's exports stood at US\$ 119.10 billion, with Engineering Goods (25.01%), Petroleum Products (17.88%) and Organic and Inorganic Chemicals (7.65%) being the top three exported commodity. Rising employment and increasing private consumption, supported by rising consumer sentiment, will support GDP growth in the coming months.

Future capital spending of the government in the economy is expected to be supported by factors such as tax buoyancy, the streamlined tax system with low rates, a thorough assessment and rationalisation of the tariff structure, and the digitization of tax filing. In the medium run, increased capital spending on infrastructure and asset-building projects is set to increase growth multipliers. The contact-based services sector has demonstrated promise to boost growth by unleashing the pent-up demand. The sector's success is being captured by a number of HFIs (High-Frequency Indicators) that are performing well, indicating the beginnings of a comeback.

India has emerged as the fastest-growing major economy in the world and is expected to be one of the top three economic powers in the world over the next 10-15 years, backed by its robust democracy and strong partnerships.

India's appeal as a destination for investments has grown stronger and more sustainable because of the current period of global unpredictability and volatility, and the record amounts of money raised by India-focused funds in 2022 are evidence of investor faith in the "Invest in India" narrative.

Market Size

Real GDP or GDP at Constant (2011-12) Prices in the year 2023-24 is estimated at Rs. 172.90 lakh crores (US\$ 2.07 trillion), against the First Revised Estimates (FRE) of GDP for the year 2022-23 of Rs. 160.71 lakh crores (US\$ 1.92 trillion). The growth in real GDP during 2023-24 is estimated at 7.6% as compared to 7.0% in 2022-23. There are 113 unicorn startups in India, with a combined valuation of over US\$ 350 billion. As many as 14 tech startups are expected to list in 2024 Fintech sector poised to generate the largest number of future unicorns in India. With India presently has the third-largest unicorn base in the world. The government is also focusing on renewable sources by achieving 40% of its energy from non-fossil sources by 2030. India is committed to achieving the country's ambition of Net Zero Emissions by 2070 through a five-pronged strategy, 'Panchamrit'. Moreover, India ranked 3rd in the renewable energy country attractive index.

According to the McKinsey Global Institute, India needs to boost its rate of employment growth and create 90 million non-farm jobs between 2023 to 2030 in order to increase productivity and economic growth. The net employment rate needs to grow by 1.5% per annum from 2023 to 2030 to achieve 8-8.5% GDP growth between same time period. India's current account deficit (CAD) narrowed to 1.2% of GDP in the October-December quarter. The CAD stood at US\$ 10.5 billion for the third quarter of 2023-24 compared to US\$ 11.4 billion or 1.3% of GDP in the preceding quarter. This was largely due to higher service exports.

Exports fared remarkably well during the pandemic and aided recovery when all other growth engines were losing steam in terms of their contribution to GDP. Going forward, the contribution of merchandise exports may waver as several of India's trade partners witness an economic slowdown. According to Minister of Commerce and Industry, Consumer Affairs, Food and Public Distribution and Textiles Mr. Piyush Goyal, Indian exports are expected to reach US\$ 1 trillion by 2030.

Recent Developments

India is primarily a domestic demand-driven economy, with consumption and investments contributing to 70% of the economic activity. With an improvement in the economic scenario and the Indian economy recovering from the Covid-19 pandemic shock, several investments and developments have been made across various sectors of the economy. According to World Bank, India must continue to prioritise lowering inequality while also putting growth-oriented policies into place to boost the economy. In view of this, there have been some developments that have taken place in the recent past. Some of them are mentioned below.

- According to HSBC Flash India PMI report, business activity surged in April to its highest level in about 14 years as well as sustained robust demand. The composite index reached 62.2, indicating continuous expansion since August 2021, alongside positive job growth and decreased input inflation, affirming India's status as the fastest-growing major economy.
- As of April 12, 2024, India's foreign exchange reserves stood at US\$ 643.162 billion.
- In 2023, India saw a total of US\$ 49.8 billion in PE-VC investments.
- Merchandise exports in March 2024 stood at US\$ 41.68 billion, with total merchandise exports of US\$ 437.06 billion during the period of April 2023 to March 2024.
- India was also named as the 48th most innovative country among the top 50 countries, securing 40th position out of 132 economies in the Global Innovation Index 2023. India rose from 81st position in 2015 to 40th position in 2023. India ranks 3rd position in the global number of scientific publications.
- In March 2024, the gross Goods and Services Tax (GST) stood at second highest monthly revenue collection at Rs.1.78 lakh crore (US\$ 21.35 billion), of which CGST is Rs. 34,532 crore (US\$ 4.14 billion), SGST is Rs. 43,746 crore (US\$ 5.25 billion).
- Between April 2000–December 2023, cumulative FDI equity inflows to India stood at US\$ 971.52 billion.
- In February 2024, the overall IIP (Index of Industrial Production) stood at 147.2. The Indices of Industrial Production for the mining, manufacturing and electricity sectors stood at 139.6, 144.5 and 187.1, respectively, in February 2024.
- According to data released by the Ministry of Statistics & Programme Implementation (MoSPI), India's Consumer Price Index (CPI) based retail inflation reached 5.69% in December 2023.
- Foreign Institutional Investors (FII) inflows between April-July (2023-24) were close to Rs. 80,500 crore (US\$ 9.67 billion), while Domestic Institutional Investors (DII) sold Rs. 4,500 crore (US\$ 540.56 million) in the same period. As per depository data, Foreign Portfolio Investors (FPIs) invested (US\$ 8.06 billion) in India during January-April 2024.
- The wheat procurement during RMS 2023-24 (till May) was estimated to be 262 lakh metric tonnes (LMT) and the rice procured in KMS 2023-24 was 385 LMT. The combined stock position of wheat and rice in the Central Pool is over 579 LMT (Wheat 312 LMT and Rice 267 LMT).

Government Initiatives

Over the years, the Indian government has introduced many initiatives to strengthen the nation's economy. The Indian government has been effective in developing policies and programmes that are not only beneficial for citizens to improve their financial stability but also for the overall growth of the economy. Over recent decades, India's rapid economic growth has led to a substantial increase in its demand for exports. Besides this, a number of the government's flagship programmes, including Make in India, Start-up India, Digital India, the Smart City Mission, and the Atal Mission for Rejuvenation and Urban Transformation, is aimed at creating immense opportunities in India. In this regard, some of the initiatives taken by the government to improve the economic condition of the country are mentioned below:

- In February 2024, the Finance Ministry announced the total expenditure in Interim 2024-25 estimated at Rs. 47,65,768 crore (US\$ 571.64 billion) of which total capital expenditure is Rs. 11,11,111 crore (US\$ 133.27 billion).
- On January 22, 2024, Prime Minister Mr. Narendra Modi announced the 'Pradhan Mantri Suryodaya Yojana'. Under this scheme, 1 crore households will receive rooftop solar installations.
- On September 17, 2023, Prime Minister Mr. Narendra Modi launched the Central Sector Scheme PM-VISHWAKARMA in New Delhi. The new scheme aims to provide recognition and comprehensive support to traditional artisans & craftsmen who work with their hands and basic tools. This initiative is designed to enhance the quality, scale, and reach of their products, as well as to integrate them with MSME value chains.
- On August 6, 2023, Amrit Bharat Station Scheme was launched to transform and revitalize 1309 railway stations across the nation. This scheme envisages development of stations on a continuous basis with a long-term vision.
- On June 28, 2023, the Ministry of Environment, Forests, and Climate Change introduced the 'Draft Carbon Credit Trading Scheme, 2023'.
- The Government of India is expected to increase public health spending to 2.5% of the GDP by 2025.

In the second quarter of FY24, the growth momentum of the first quarter was sustained, and high-frequency indicators (HFIs) performed well in July and August of 2023. India's comparatively strong position in the external sector reflects the country's positive outlook for economic growth and rising employment rates. India ranked 5th in foreign direct investment inflows among the developed and developing nations listed for the first quarter of 2022.

India's economic story during the first half of the current financial year highlighted the unwavering support the government gave to its capital expenditure, which, in 2023-24, stood 37.4% higher than the same period last year. In the budget of 2023-24, capital expenditure took lead by steeply increasing the capital expenditure outlay by 37.4 % in BE 2023-24 to Rs.10 lakh crore (US\$ 120.12 billion) over Rs. 7.28 lakh crore (US\$ 87.45 billion) in RE 2022-23. The ratio of revenue expenditure to capital outlay increased by 1.2% in the current year, signalling a clear change in favour of higher-quality spending. Stronger revenue generation because of improved tax compliance, increased profitability of the company, and increasing economic activity also contributed to rising capital spending levels. In February 2024, the Finance Ministry announced the total expenditure in Interim 2024-25 estimated at Rs. 47,65,768 crore (US\$ 571.64 billion) of which total capital expenditure is Rs. 11,11,111 crore (US\$ 133.27 billion).

Since India's resilient growth despite the global pandemic, India's exports climbed at the second-highest rate with a year-over-year (YoY) growth of 8.39% in merchandise exports and a 29.82% growth in service exports till April 2023. With a reduction in port congestion, supply networks are being restored. The CPI-C inflation reduction from June 2022 already reflects the impact. In September 2023 (Provisional), CPI-C inflation

was 5.02%, down from 7.01% in June 2022. With a proactive set of administrative actions by the government, flexible monetary policy, and a softening of global commodity prices and supply-chain bottlenecks, inflationary pressures in India look to be on the decline overall. GLOBAL BIOFUEL INDUSTRY

Most new biofuel demand comes from emerging economies, especially Brazil, Indonesia and India. All three countries have robust biofuel policies, rising transport fuel demand and abundant feedstock potential. Ethanol and biodiesel use expand the most in these regions. Although advanced economies including the European Union, the United States, Canada and Japan are also strengthening their transport policies, biofuels growth is constrained by factors such as rising electric vehicle adoption, vehicle efficiency improvements, technical limitations and high blending costs in some markets. Renewable diesel and biojet fuel are the primary growth segments in these regions.

World leaders left COP28 this year with clear priorities to triple global renewable capacity, double progress on energy efficiency, drive down methane emissions by 2030 and transition away from fossil fuels – four of the five key priority areas for success indicated by the IEA well before the COP28 gathering. Biofuels are one of the keys to transitioning away from fossil fuels as a complementary measure to electric vehicles and vehicle efficiency improvements. They are also compatible with existing vehicles and over the medium-term play a significant role in reducing emissions from long-distance road, air and maritime transport. In the IEA's net zero scenario, biofuels production nearly triples from current levels by 2030, but the world is not on track for this.

Global biofuel demand, main case, accelerated case and in the Net Zero Scenario, 2010-2030

In the IEA's accelerated case strengthening existing policies, establishing new targets and raising biojet fuel doubles annual historical growth rates to 8% through 2028. Nearly half of this additional growth, 29 billion litres of new demand, results from strengthened policies in existing markets such as the United States, Europe and India (for ethanol), and an additional 21 billion litres comes from new markets (biodiesel in India and ethanol in Indonesia). Biojet fuel offers a third growth avenue, expanding to cover nearly 3.5% of global aviation fuels – up from 1% in the main case.

However, even this level of growth falls short of a net zero scenario. To align with a net zero pathway, biofuels production from new processing technologies to access a large agricultural and forestry residue base must also quintuple by 2030, necessitating significant developmental support, as most remain pre-commercial. To address GHG emissions intensity, technologies such as CCUS applied to biofuel projects can very effectively reduce GHG emissions, with lower feedstock demand. Finally, biofuel production must expand significantly outside of the United States, Brazil, Europe and Indonesia that dominate production and use today. In all cases, predictable long-term policies with clear sustainability requirements are crucial to minimise uncertainty and stimulate investment.

On the 9th of September 2023, India launched the Global Biofuels Alliance with the leaders of Singapore, Bangladesh, Italy, the United States, Brazil, Argentina, Mauritius and the UAE on the sidelines of the G20 summit. As of January 2024, the GBA now has 22 member countries alongside 12 international organisations. The GBA aims to accelerate the deployment of sustainable biofuels. The Alliance is a welcome addition to international and domestic efforts to expand sustainable biofuel supplies in line with a net zero trajectory. Despite the urgent need to increase the production of sustainable biofuels to cut transport emissions and ensure energy security, current growth is lagging what is required to achieve global net zero emissions by mid-century, according to the IEA's Net Zero Scenario. However, with the right policies and practices, rapid sustainable biofuel deployment is achievable. The GBA can help get sustainable biofuels on track by focusing on three main areas:

- Identify and help develop markets with high potential for biofuels production: Over 80% of sustainable biofuels production and use is in the United States, Brazil, Europe and Indonesia. However, total transport fuel demand from these countries accounts for less than half of global transport fuel demand. Expanding sustainable biofuels use will therefore require expansion into new markets and expanded production in existing markets. Augmenting sustainable supplies in each market requires enhancing measurement and monitoring for sustainable supplies, assessing mixed technology deployment pathways and developing regional-specific policy packages, while learning from existing experiences.
- Accelerate technology deployment to commercialise advanced biofuels: Advanced biofuels must grow 11 times by 2030 from 2022 levels in the IEA's Net Zero Scenario, doubling total biofuels production over the same period. However, planned investments to date remain well below this level of growth.
- Seek consensus on performance-based sustainability assessments and frameworks: More consistent and internationally recognised sustainability frameworks would help improve measurement and reporting, improve GHG reductions, encourage sustainable biofuels trade and help new markets incorporate lifecycle GHG accounting into their biofuel policies.

Expanding sustainable feedstock supply and developing new markets requires particular attention:

Notes: Biofuel demand estimates from IEA (2023), [Renewable Market Update – June 2023](#) and Liquid transport fuels from IEA (2023), [Oil 2023](#).

Expanding biofuel production at a pace and scale consistent with the NZE Scenario requires developing new markets and expanding production in existing markets, while also expanding sustainable feedstock supply. More than 80% of biofuels production occurs in just four markets – the United States, Brazil, Europe and Indonesia – even if these regions will represent a declining share of total fuel demand in the coming years. Lessons learned from Brazil, India and the United States to expand biofuel use in other markets must be combined with more substantial efforts to expand sustainable feedstock supply.

There are sufficient sustainable feedstocks available to support a tripling of biofuel production by 2030 within strict sustainability bounds. However, there is evidence that feedstock availability may constrain some biofuel growth in the coming years, particularly biodiesel. Addressing near-term feedstock availability and supporting growth on a net zero trajectory requires three broad strategies. First, improving land productivity to make the most of existing cropland and marginal land. Second, improving waste and residue collection of those feedstocks compatible with existing biofuel technologies such as residue vegetable oils. Third, deploying technologies that can process different feedstocks such as cellulosic ethanol. In addition, significantly reducing the lifecycle carbon intensity of biofuels with technologies like carbon capture utilisation and storage (CCUS) and efficiency improvements can also help reduce feedstock pressure in markets that aim to reduce GHG emissions. The right combination of approaches depends on the unique conditions of each country.

Ethanol blending rates have plateaued at near 7% on an energy basis (10% volume basis). Expanding blending levels will require infrastructure investment that is compatible with E15 blends and ongoing legal authority to blend at this level. The RFS and its supporting policies were also unable to prompt growth in ethanol using woody residues (cellulosic ethanol). The initial policy planned for 60 billion litres of cellulosic ethanol by 2022, which currently stands at 2 billion litres because of a lack of development. Technology challenges, a long period of low oil prices, feedstock collection challenges, and policy uncertainty all contributed to a lack of commercialisation for cellulosic ethanol in the United States.

For biodiesel, the RFS, combined with the biodiesel blender credit and low-carbon fuel standard, have expanded production and use to 12 billion litres, 20% of global demand. Biodiesel, including renewable diesel, now provides 8% of energy supply for diesel vehicles in the United States, higher than ethanol's share for gasoline vehicles. Over the past three years, renewable diesel production has led biodiesel growth in the United States because it can be blended at higher levels, can be produced from residues and attains low GHG intensities. In 2022, near 70% of biodiesel was produced from vegetable oils with the remainder from residue fats, oils and greases.

While biodiesel and renewable diesel have expanded, rising costs and feedstock supply have created challenges. Biodiesel and renewable diesel remain 50% more expensive than fossil diesel in 2023, but at current blending levels this translates to only a 4% premium at the pump. In its latest impact assessment for the RFS, the Environmental Protection Agency noted that it is more likely that feedstock limitations will limit renewable diesel production in the United States than production capacity.

The Sustainable Aviation Grand Challenge Roadmap, IRA tax credits and state level low-carbon fuel standards continue to chart a course for biofuels. In the aviation sector the United States Sustainable Aviation Grand Challenge targets 11 billion litres of sustainable aviation fuel by 2030. This target is supported by production and investment tax credits to 2031. Achieving it requires commercialising technologies and expanding feedstocks beyond those that are used today, while maintaining low emission intensities. The United States has significant feedstock potential, especially for agriculture and other residues. However, processing these residues requires developing and commercialising new biofuel technologies.

INDIAN BIOFUEL INDUSTRY

India has quickly joined the ranks of major biofuel producer and consumer thanks to a set of coordinated policies, high political support, and an abundance of feedstocks. In 2018 India released its National Policy on Biofuels which set blending targets for ethanol (20% blending by 2030) and biodiesel (5% by 2030), feedstock requirements for different fuels and laid out the responsibilities of 11 ministries to coordinate government actions. Beyond blending targets, India established guaranteed pricing, long-term ethanol contracts, technical standards and codes and financial support for building new facilities and upgrading existing ones. Buoyed by its success, the Government moved the ethanol 20% volume blending target forward by 5 years to 2025-26, which was enshrined in an updated National Policy on Biofuels in 2022.

India has another opportunity to boost global biofuel deployment as well through the Global Biofuels Alliance, which it launched in 2023 with

leaders from eight other countries. Last year the IEA released “Biofuel Policy in Brazil, India and the United States: Insights for the Global Biofuel Alliance” to support the GBA’s development. In it the IEA recommends the GBA focus on developing new and existing markets since over 80% of production is concentrated in four regions: the United States, Brazil, Europe and Indonesia, which account for only half of global

transport fuel demand. We also recommend accelerating technology deployment and commercialisation, and seeking consensus on performance-based sustainability assessments.

In this brief commentary we consider the global status of biofuels, India's domestic potential and what the GBA can do to help accelerate sustainable biofuels use globally.

Over the next five years biofuel demand is set to expand 38 billion litres, a near 30% increase from the last five-year period. In fact, total biofuel demand rises 23% to 200 billion litres by 2028, with renewable diesel and biojet accounting for almost half of this growth with the remainder coming from ethanol and biodiesel.

Five-year biofuel demand growth, main case, 2011-2028

India is now the world's third largest producer and consumer of ethanol thanks to nearly tripling production over the past five years. It has potential to expand further with the right policies, keeping costs in check and securing sustainable feedstocks. In 2018 India released its National Policy on Biofuels which set blending targets for ethanol (20% blending by 2030) and biodiesel (5% by 2030), feedstock requirements for different fuels and laid out the responsibilities of 11 ministries to coordinate government actions. Beyond blending targets, India established guaranteed pricing, long-term ethanol contracts, and technical standards and codes. Financial support for building new facilities and upgrading existing ones was also provided. Buoyed by its success, the Government moved the 20% volume blending target for ethanol forward by 5 years to 2025-26, which was enshrined in an updated National Policy on Biofuels in 2022.

Supported by these policies, ethanol for blending in gasoline production and demand nearly tripled between 2018 and 2023 and now stands at near 12% (7% on an energy basis). Sugar cane provides most ethanol production with the remainder from food grains such as maize and surplus rice stocks determined by the Food Corporation of India. To diversify feedstocks beyond sugar cane, India provides separate pricing for maize-based ethanol and includes ethanol produced from agricultural residues such as cotton stalks, wheat straw, rice straw, bagasse and bamboo.

Achieving 20% ethanol blending on average across India will require increasing the fleet of vehicles capable of accepting higher ethanol blending levels. India is encouraging flex-fuel vehicles and retrofits are possible for older vehicles, including two wheelers. In addition, a greenhouse gas (GHG) measurement and reporting requirement would help India assure and improve GHG reductions from biofuel use in the transport sector. India will also need to continue to diversify feedstocks to help avoid shortages as it experienced at the end of 2023. New cellulosic ethanol plants, one completed last year, and three others under development, will help.

India has other opportunities to expand biodiesel for use in diesel vehicles and biojet fuel as a replacement for jet fuel. The government has already established a 5% biodiesel target by 2030 which would require almost 4.5 billion litres of biodiesel per year according to IEA estimates. Mobilising production will require a similar mix of policies as provided for ethanol including production support, guaranteed pricing and feedstock support, especially for mobilising residue oils like used cooking oil and vegetable oils grown on marginal land.

● Ethanol ● Biodiesel ● Biojet fuel

Biojet fuel is another growth area. On 25 November 2023, the Ministry of Oil, Petroleum and Natural Gas announced indicative blending targets of 1% by 2027 and 2% by 2028 for international flights leaving India. We estimate this would require near 100 million litres of biojet fuel per

year, likely to come from residue or vegetable oils grown on marginal land. However, future growth could come from other technologies such as alcohol-to-jet using ethanol and gasification technologies whereby agricultural, forestry and municipal solid waste can be converted into jet fuel.

India has already demonstrated how to quickly accelerate biofuel use. It now has an opportunity to extend those lessons learned to other biofuel types. Its leadership with the Global Biofuels Alliance is a welcome addition to international efforts to accelerate sustainable biofuels demand. OUR PRODUCT PORTFOLIO

PRODUCT DESCRIPTION

Biodiesel is a renewable, biodegradable fuel manufactured domestically from non-edible vegetable oils, or recycled restaurant grease, Non-edible fat and methanol. Biodiesel meets both the biomass-based diesel and overall advanced biofuel requirement of the Renewable Fuel Standard. Biodiesel is a liquid fuel often referred to as B100 or neat biodiesel in its pure, unblended form. Like petroleum diesel, biodiesel is used to fuel compression-ignition engines.

Biodiesel is a clean-burning fuel and safe alternative to replace traditional petroleum diesel. It has high-lubricity and can be a fuel component for use in existing, unmodified diesel engines. This means that no retrofits are necessary when using biodiesel fuel in any diesel-powered combustion engine. It is the only alternative fuel that offers such convenience. Biodiesel acts like petroleum diesel, but produces less air pollution, comes from renewable sources, is biodegradable and is safer for the environment. Producing biodiesel fuels can help create local economic revitalization and local environmental benefits. Many groups interested in promoting the use of biodiesel already exist at the local, state and national level.

Bio-Diesel:

- **On-Road Vehicles:** All Vehicles having Diesel Engine can be powered by Biodiesel without any hassle.
- **Off-Road Vehicles:** Natural Biodiesel fuel can be used for construction, mining, and farm machinery.
- **Marine Vessels:** Natural Biodiesel can be used in marine engines safely. Marine use is especially attractive due to the elimination of any possibility for contamination of waterways.
- **Stationary Power Generation:** With new power generation capacity coming online, Natural biodiesel makes an attractive choice to meet the regulations. Many stationary applications are permitted sources requiring exhaust emission control system, which will work well with biodiesel but will not work with diesel fuel.
- **Boiler:** With natural gas prices rising high, biodiesel can be substituted easily for natural gas with minor changes necessary to the burner train.
- **Lubricity Agent /Additive:** Natural biodiesel can also be used as a lubricity agent/enhancer in many applications. It is especially useful in marine applications where water contamination with petroleum lubricity agents can create problems. With the low-sulphur fuel regulation of future, biodiesel can be used as a lubricity additive. A 1-2% biodiesel added to diesel fuel can increase diesel lubricity by 65%.
- **Fuel Additive:** Biodiesel can also be used as a diesel fuel additive for the purpose of keeping the injectors, pumps and other combustion components clean. A 1-2% blend should be sufficient for this purpose.

Crude Glycerin:

Crude glycerine, a by-product of biodiesel production and soap making, has multiple industrial and agricultural applications. Here are some of the main uses:

1. **Animal Feed-** Crude glycerol can be used as a feedstuff or as an additive to stabilize pellets in animal feed. However, only glycerol that's at least 80% pure and comes from vegetable fats and oils can be used for animal feed.
2. **Energy production-** Crude glycerol can be used as an energy supplement for cattle feed, or as a substitute for boiler fuel or to generate electricity and thermal energy. It's cheaper than pure glycerol and is high in energy.
3. **Biological conversion:** Crude glycerol can be used as a primary material for biological conversions, such as fermenting succinic acid, citric acid, or omega-3 fatty acids.
4. **Pharma critical industry:** In the pharmaceutical industry, glycerine is used as a sweetener in syrups, lozenges, and as an excipient in eyewash solutions. It may also be found in eardrop products, jellies and creams for topical use, in expectorants for congestion, suppositories, and gel capsules. Crude glycerine can also use for making propylene glycol which is used as an additive and a stabiliser in Pharma, edible and skin care applications.

Glycerol Derivatives: In the pharmaceutical industry, glycerin is used as a sweetener in syrups, lozenges, and as an excipient in eyewash solutions. It may also be found in eardrop products, jellies and creams for topical use, in expectorants for congestion, suppositories, and gel capsules.

5. Chemical Industry: -

- Glycerol Derivatives: Crude glycerine can be refined and processed into various glycerol derivatives such as propylene glycol, which is used in antifreeze, and glycerol carbonate, used in coatings and polymers.
- Industrial Chemicals: It serves as a feedstock for producing chemicals like epichlorohydrin, a precursor for epoxy resins.
- Soil Amendment: It can be used to improve soil moisture retention and fertility, acting as a carbon source for soil microbes.
- Fertilizer: Crude glycerine can be processed into fertilizers or used directly to provide nutrients for crops.

6. Textile and Paper Industry as moisturizing agent

Fatty acids usage - Fatty acids are derived as a by-product in the biodiesel manufacturing process. It is mainly used in the production of soaps, detergents and cosmetics. In some cases, it can be reused for the production of biodiesel also.

Caustic Potash Flakes:

Caustic potash is another name for potassium hydroxide (KOH). It is the largest volume potassium chemical used for commercial, non-fertilizer purposes. Caustic potash is used as a cleaning agent and sanitizer in wineries, mainly to clean the insides of tanks from biofilms of bacteria and yeast. As a strongly basic inorganic compound, it works effectively to kill acidic wine organisms that are adapted to low pH environments.

Waste Sludge:

Waste Sludge generally comes from the cleaning of storage tanks of non-edible oils in the industry that uses these types of non-edible oils. It is a cheap and good source for producing soaps as it contains some amount of oil percentage within them. It is also used as a low cost alternative in generating heat in basic furnaces/heating systems.

Used Cooking Oil:

UCOs are oils and fats that have been used for cooking or frying in the food processing industry, restaurants, fast foods and at consumer level, in households. Used cooking oils can be refined into renewable fuels – a drop-in solution to replace fossil fuels – or used to produce raw material for polymers and chemicals, which can then be turned, for example, into more sustainable, bio-based plastics. Waste and residues, such as used cooking oil, are an important means to help reduce our reliance on fossil resources.

Esterified Fatty Acid:

Fatty acid esters (FAEs) are a type of ester that result from the combination of a fatty acid with an alcohol. When the alcohol component is glycerol, the fatty acid esters produced can be monoglycerides, diglycerides, or triglycerides. Dietary fats are chemically triglycerides. Esters of fatty acids are colorless, although degraded samples are sometimes appear to be yellow or even brown. The triglycerides are powders, flakes, coarse powders, or granular or waxy lumps, oils or liquids. They are almost odorless.

Methanol:

Methanol (also called methyl alcohol and wood spirit, amongst other names) is an organic chemical compound and the simplest aliphatic alcohol.

Citric Acid:

Citric acid has many commercial uses. In the food industry, due to its high water solubility it is used as a preservative. In cosmetics, it helps adjust pH levels of the skin care products. In the pharma industry, its ability to form complexes with heavy metals make it useful as a sequestering agent. It is also used as a cleaning agent as it helps in cleaning membranes.

Refined Rice Oil:

Refined rice bran oil has a high smoke point, making it ideal for deep frying. Its neutral taste and golden color also help food retain its natural flavor. It is also used for maintaining good skin health. Refined rice bran oil contains antioxidants and squalene, which can help soften skin, reduce dark spots and circles, and treat dry skin. It can also help delay wrinkles and protect skin from sun damage.

Crude Sunflower Oil:

It is generally used to produce edible derivatives of sunflower which in turn are used in cooking and skin care industry.

Sodium Methoxide:

Sodium methoxide is a base and reagent used in organic chemistry. It has many uses, including:

- **Pharmaceuticals:** Sodium methoxide powder is used in the production of vitamins A1 and B1, sulfamethoxypyridazine, sulfadiazine, and trimethoprim. It can also be used as an intermediate in the production of pharmaceuticals.
- **Biodiesel:** Sodium methoxide is used as an alkaline catalyst in the production of biodiesel grade methyl esters.
- **Edible fats and oils:** Sodium methoxide can be used as a catalyst to treat edible fats and oils, especially lard.
- **Analytical reagent:** Sodium methoxide can be used as an analytical reagent.

RBD Palm Sterin:

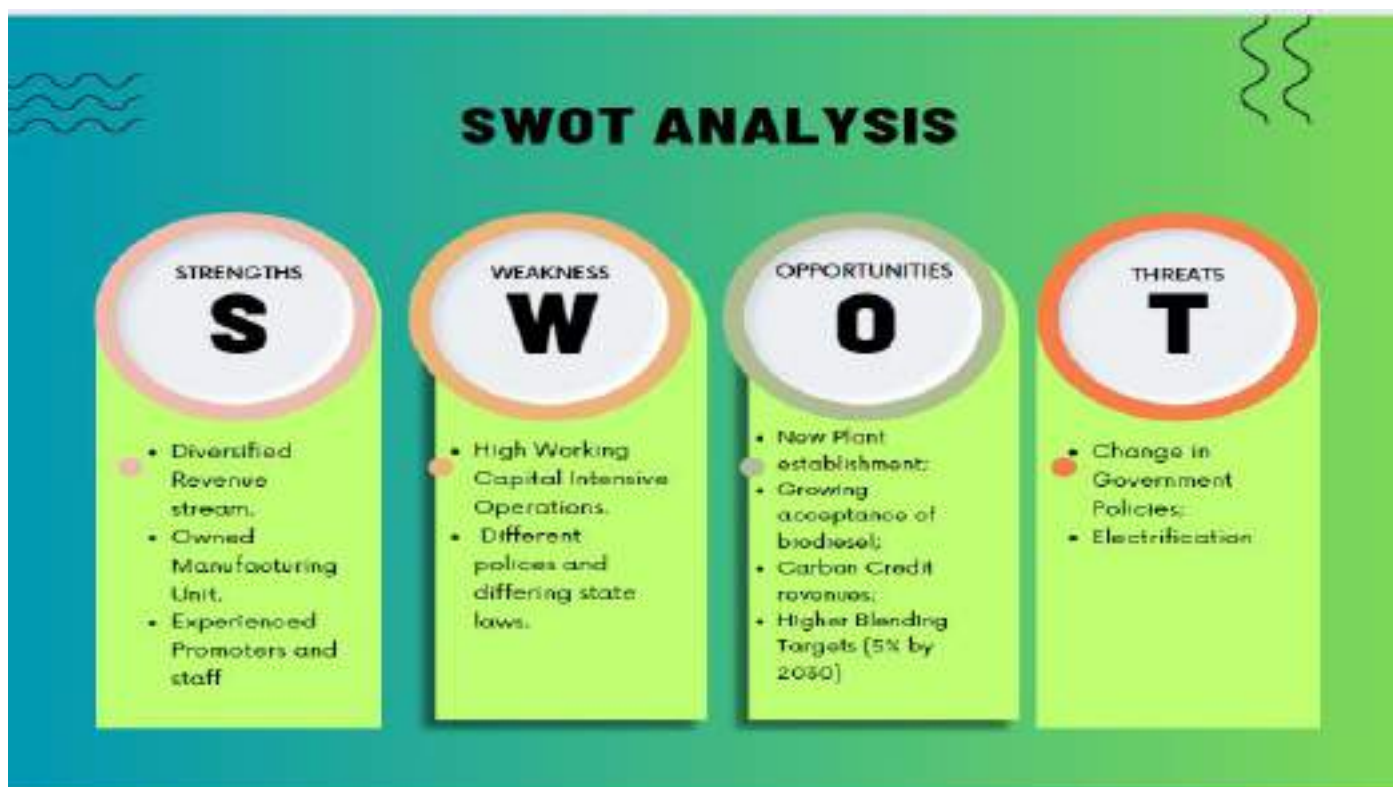

Refined, Bleached, and Deodorized (RBD) palm stearin is a hard vegetable fat derived from refined palm oil. It is used as specialty fats in coating confectionery and a rich raw material for producing esters. It is also used as a mixing agent in paints, dyes, and insecticides also.

Job Work:

Semi refining of glycerine for other manufacturers is sometimes carried at our premises. Our machinery is well equipped to handle different sources of glycerin and make it usable in various industries.

Fat:

Fats are a rich source of saturated fats that can be used as a main raw material in soap manufacturing industry, biofuel manufacturing industry and detergent manufacturing industry. Due to its good elasticity and lubricative nature, it also plays a key role in manufacturing of greases and lubricants.

KEY MANUFACTURING PROCESS

1) Raw Material Sourcing:

Biodiesel is produced from various feedstocks, including vegetable oils, non-edible fats, and recycled cooking oils. Commonly used feedstocks include soybean oil, canola oil, palm oil, used cooking oil, and non-edible fats. These feedstocks provide the triglycerides necessary for the transesterification process to produce biodiesel. Vegetable oils like soybean, canola, and palm oil are widely used due to their availability and high oil content. Used cooking oil and non-edible fats offer a sustainable alternative by recycling waste products, reducing the overall environmental impact of biodiesel production.

2) Feed Stock Pre-Treatment:

Before biodiesel production, raw materials undergo pre-treatment to ensure quality and efficiency. Filtering removes impurities like food particles and dirt from used cooking oil. Degumming eliminates phospholipids from crude vegetable oils, which can interfere with the biodiesel reaction. Drying removes water from the oils, crucial for preventing hydrolysis during transesterification. This pre-treatment ensures that the feedstock is clean, dry, and ready for the subsequent chemical reactions, thereby enhancing the yield and quality of the final biodiesel product.

3) Transesterification:

Transesterification is the core chemical process in biodiesel production, converting triglycerides in oils/fats into biodiesel (methyl esters) and glycerol. The key steps involved are:

I. Mixing Alcohol and Catalyst:

Methanol or ethanol is mixed with a catalyst, usually sodium hydroxide (NaOH) or potassium hydroxide (KOH), to create methoxide or ethoxide. This mixture acts as a reactant that breaks down triglycerides into biodiesel and glycerol.

II. Reaction:

The alcohol-catalyst mixture is combined with the pre-treated oil in a reactor. The mixture is heated and stirred to ensure the reaction proceeds efficiently. This process typically takes place at a temperature of 60-70°C and lasts for 1-2 hours. The heat and agitation help the triglycerides react with the methoxide or ethoxide, forming biodiesel and glycerol.

III. Separation:

Once the reaction is complete, the mixture is allowed to settle in a settling tank. Due to the difference in densities, biodiesel (the lighter phase) rises to the top while glycerol (the heavier phase) settles at the bottom. This natural separation facilitates the collection of both products. The biodiesel is then drawn off from the top, and the glycerol is removed from the bottom for further processing or disposal.

This transesterification process is essential for converting raw oils and fats into usable biodiesel, ensuring an efficient and high-quality end product.

4) Purification:

The purification process ensures biodiesel meets quality standards.

- ◆ **Washing:** Crude biodiesel is washed with water to remove residual catalysts, soaps, and glycerol. This involves several stages of washing and settling to ensure thorough cleansing.
- ◆ **Drying:** After washing, the biodiesel is dried to remove any remaining water. This step is crucial to achieve the specified moisture content, preventing issues like microbial growth and ensuring proper combustion in engines. The result is a high-quality, pure biodiesel **ready for quality testing and use.**

5) Quality Testing:

Purified biodiesel undergoes rigorous quality testing to ensure it meets BIS 15607:2022 standards as well as international standards like EN 14214. Key tests include:

- ◆ **Viscosity:** Measures the flow properties of biodiesel.
- ◆ **Acid Value:** Indicates the free fatty acid content, reflecting the quality and stability of the fuel.
- ◆ **Free Glycerin and Total Glycerin Content:** Assesses the glycerol levels, ensuring minimal residues from the production process.
- ◆ **Methanol Content:** Ensures low levels of residual methanol for safety and performance.
- ◆ **Water and Sediment Content:** Confirms low contamination levels to prevent engine and storage issues.

These tests guarantee biodiesel's performance and compliance with industry standards.

6) Storage and Distribution:

Once biodiesel passes quality testing, it is prepared for storage and distribution.

Storage: Biodiesel is stored in clean, dry, and dark conditions to prevent oxidation and contamination, ensuring long-term stability.

Distribution: The biodiesel is then transported to fuel stations, blending facilities, or directly to end-users. Proper storage and handling during distribution are crucial to maintaining fuel quality, ensuring it remains effective and safe for use in various diesel engines. This final step ensures that high-quality biodiesel is readily available for consumers and commercial applications.

BIDDING PROCESS AND CLIENTELE ACQUISITION

FOR GOVERNMENT PUBLIC SECTOR UNDERTAKINGS (PSUs):

To bid in the tendering process of government Public Sector Undertakings (PSUs), a strict initial-screening process is held for the empanelment of the biodiesel companies. This empanelment screening process includes technical specifications and checking of any other necessary documentation, such as company certifications and profiles. After successfully passing the screening, the biodiesel company is then empanelled for 5 years. Only the successfully empanelled biodiesel companies can bid in the tender. After the official announcements from PSUs to empanelled biodiesel companies, the company must obtain the tender documents, which provide detailed information about the project requirements, specifications, and submission procedures.

The company then prepares a detailed bid proposal that aligns with the requirements outlined in the tender documents. This proposal should include technical specifications and bid quantities for four quarters on a year. Ensuring that the bid complies with all the stated guidelines and requirements is crucial for a successful submission.

Once the bid proposal is complete, the company must submit it before the specified deadline, following the exact submission format and procedures outlined in the tender documents. After submission, the bid will undergo an evaluation process, where it will be assessed based on criteria related to least freight cost to the nearest terminal and other such adherence to requirements.

If the bid is successful, the company will be awarded the contract and will proceed to sign formal agreements with the PSU. Throughout the bidding process, maintaining clear and timely communication with the PSU and addressing any queries or requests for additional information is essential for ensuring a smooth and successful engagement.

FACTORS AFFECTING OUR RESULT OF OPERATIONS

Except as otherwise stated in this Prospectus and the Risk Factors given in the Prospectus, the following important factors could cause actual results to differ materially from the expectations include, among others:

Regulatory Framework

We have obtained all regulatory permissions which are necessary to run our business, Further, some of the approvals are granted for fixed periods of time and need renewals, which are obtained in the course of business, however, there may be change in statutory regulations at any time which cannot be predicted by us. There can be no assurance that the change in regulations will not impact our operations in the future.

Ability of Management

Our success depends on the continued services and performance of the members of our management team and other key employees. Competition for senior management in the industry is intense, and we may not be able to retain our existing senior management or attract and retain new senior management in the future. The loss of any member of our senior management or other key personnel may adversely affect our business, results of operations and financial condition.

Market & Economic conditions

India is one of the largest economies and is growing at a rapid pace. But in this globalised economy, all the businesses face an uncertain level of volatility from unexpected global events which ranges from global pandemics to wars, to weather changes to supply chain disruption, which may change the economic dynamics and the purchasing capability of the end customers. At the time of market slowdown, the demand falls which has adverse impact on our business.

Competition

We operate in a competitive atmosphere. Our competition varies by market, geographic areas and type of products. Our Company may face stiff competition from domestic as well as global market as the dynamic changes. Some of our competitors may have greater resources than those available to us. While service quality, technical ability, performance records, etc. are key factors in client decisions among competitors, however, price & quality are the deciding factor in most cases. Further, this industry is fragmented with many small and medium sized companies and entities, which manufactures some of these products at various levels, which may adversely affect our business operation and financial condition. Further, there are no entry barriers in this industry and any expansion in capacity of existing market players would further intensify competition. Moreover, as we seek to diversify into new geographical areas, new territories, new emerging markets, we may face competition from competitors that have a pan-India presence and also from competitors that have a strong presence in regional markets. The markets in which we compete and intend to compete are undergoing, and are expected to continue to undergo, rapid and significant change. We expect competition to intensify as technological advances and consolidations continue. These competitive factors may force us to reduce rates, and to pursue new market opportunities. Increased competition could result in reduced demand for our products, increased expenses, reduced margins and loss of market share. Failure to compete successfully against current or future competitors could harm our business, operating cash flows and financial condition.

COVID-19 Pandemic

Since the onset of the COVID-19 pandemic in March 2020, our Company's operations have been affected as our employees faced the threat of getting infected. In 2020, cases of the novel corona virus started rapidly increasing in India, which led the government of India to impose a nationwide lockdown. The spread of Covid-19 and its recent developments have had and might continue to have repercussions across local, national and global economies. To prevent the spread of Covid-19 and to comply with the restrictions, we had to temporarily suspend our operations in order to follow the Government's norms. We continuously monitored the economic conditions and have outlined sufficient measures to combat the pandemic situation at our business premises. Once the lockdown was lifted, our operations restarted in full swing. Initially we did find a little hiccup in finding workers but because of our enterprising organization, we were able to source quality workforce and we were able to train them and we restarted our operations. After lifting the lockdown and resuming our operations the demand in our industry abruptly increased from the different sectors and we attained the highest production during the partial year 2020-21 and FY 2021-22. The demand after pandemic ultimately nullified the impact of shutdown during COVID 19 pandemic. The future impact of COVID-19 or any other severe communicable disease on our business and results of operations depends on several factors including those discussed in the chapter "Risk Factors" beginning on Page No. 29. We are continuing to closely monitor the economic conditions and the effect of COVID-19 and have outlined certain measures to combat the pandemic situation and to minimize the impact on our business.

Phased implementation of Unified Payments Interface

SEBI has issued UPI Circulars in relation to streamlining the process of public Issue of equity shares and convertibles. Pursuant to the UPI Circulars, UPI has been introduced in a phased manner as a payment mechanism (in addition to mechanism of blocking funds in the account maintained with SCSBs under ASBA) for applications by RIIs through intermediaries with the objective to reduce the time duration from public Issue closure to listing from six Working Days to upto three Working Days. Considering the time required for making necessary changes to the systems and to ensure complete and smooth transition to the UPI Mechanism, the UPI Circulars proposes to introduce and implement the UPI Mechanism in three phases in the following manner:

- a) Phase I: This phase was applicable from January 01, 2019 and lasted till June 30, 2019. Under this phase, a Retail Individual Bidder, besides the modes of Bidding available prior to the UPI Circulars, also had the option to submit the Bid cum Application Form with any of the intermediary and use his / her UPI ID for the purpose of blocking of funds. The time duration from public Issue closure to listing continued to be six Working Days.
- b) Phase II: This phase has commenced with effect from July 01, 2019 and will continue for a period of three months or floating of five main board public Issues, whichever is later. Under this phase, submission of the Bid cum Application Form by a Retail Individual Investor through intermediaries to SCSBs for blocking of funds has been discontinued and has been replaced by the UPI Mechanism. However, the time duration from public Issue closure to listing continues to be six Working Days during this phase. SEBI vide its circular no. SEBI/HO/CFD/DIL2/CIR/P/2020/50 dated March 30, 2020 extended the timeline for implementation of UPI Phase II till further notice.
- c) Phase III: Subsequently, the time duration from public Issue closure to listing would be reduced to be three Working Days.

Pursuant to the UPI Circular, SEBI has set out specific requirements for redressal of investor grievances for applications that have been made through the UPI Mechanism. The requirements of the UPI Circular include, appointment of a nodal officer by the SCSB and submission of their details to SEBI, the requirement for SCSBs to send SMS alerts for the blocking and unblocking of UPI mandates, the requirement for the Registrar to submit details of cancelled, withdrawn or deleted applications, and the requirement for the bank accounts of unsuccessful Bidders to be unblocked not later than one day from the date on which the Basis of Allotment is finalized. Failure to unblock the accounts within the timeline would result in the SCSBs being penalised under the relevant securities law. Additionally, if there is any delay in the redressal of investors complaints in this regard, the relevant SCSB as well as the post – Issue BRLM will be required to compensate the concerned investor.

All SCSBs offering the facility of making applications in public Issues shall also provide the facility to make application using UPI. The Company will be required to appoint one of the SCSBs as a Sponsor Bank to act as a conduit between the Stock Exchanges and NPCI in order to facilitate collection of requests and/ or payment instructions of the Retail Individual Bidders using the UPI.

The processing fees for applications made by Retail Individual Bidders using the UPI Mechanism may be released to the remitter banks (SCSBs) only after such banks provide a written confirmation on compliance with SEBI Circular No: SEBI/HO/CFD/DIL2/P/CIR/2021/570 dated June 2, 2021 read with SEBI Circular No: SEBI/HO/CFD/DIL2/CIR/P/2021/2480/1/M dated March 16, 2021.

Illustration of the Book Building and Price Discovery Process: Bidders should note that this example is solely for illustrative purposes and is not specific to the Offer; it also excludes Bidding by Anchor Investors. Bidders can bid at any price within the Price Band. For instance, assume a Price Band of ₹20 to ₹ 24 per share, Offer size of 3,000 Equity Shares and receipt of five Bids from Bidders, details

of which are shown in the table below. The illustrative book given below shows the demand for the Equity Shares of the issuer at various prices and is collated from Bids received from various investors.

Bid Quantity	Bid Amount (₹)	Cumulative Quantity	Subscription
500	24	500	16.67%
1,000	23	1,500	50.00%
1,500	22	3,000	100.00%
2,000	21	5,000	166.67%
2,500	20	7,500	250.00%

The price discovery is a function of demand at various prices. The highest price at which the issuer is able to Offer the desired number of Equity Shares is the price at which the book cuts off, i.e., ₹ 22.00 in the above example. The issuer, in consultation with the BRLM, may finalise the Offer Price at or below such Cut-Off Price, i.e., at or below ₹ 22.00. All Bids at or above this Offer Price and cut-off Bids are valid Bids and are considered for allocation in the respective categories.

Anchor Investors are not allowed to withdraw their Bids after Anchor Investors bidding date.

Process for generating list of allottees: -

- Instruction is given by RTA in their Software System to reverse category wise all the application numbers in the ascending order and generate the bucket /batch as per the allotment ratio. For example, if the application number is 78654321 then system reverses it to 12345687 and if the ratio of allottees to applicants in a category is 2:7 then the system will create lots of 7. If the drawal of lots provided by DSE is 3 and 5 then the system will pick every 3rd and 5th application in each of the lot of the category and these application s will be allotted the shares in that category.
- In categories where there is proportionate allotment, the Registrar will prepare the proportionate working based on the oversubscription times.

The responsibility of granting approval for foreign investment under the Consolidated FDI Policy and FEMA has been entrusted to the concerned ministries / departments.

The Government of India has from time to time made policy pronouncements on FDI through press notes and press releases. The Department for Promotion of Industry and Internal Trade, Ministry of Commerce and Industry (formerly Department of Industrial Policy and Promotion), Government of India (“**DPIIT**”) issued the Consolidated FDI Policy, which consolidates and supersedes all previous press notes, press releases and clarifications on FDI issued by the DPIIT that were in force and effect prior to October 15, 2020. Under the current FDI Policy, 100% foreign direct investment is permitted for our Company.

The transfer of shares between an Indian resident and a non-resident does not require the prior approval of RBI, provided that: (i) the activities of the investee company are under the automatic route under the Consolidated FDI Policy and transfer does not attract the provisions of the SEBI Takeover Regulations, (ii) the non-resident shareholding is within the sectoral limits under the Consolidated FDI policy, and (iii) the pricing is in accordance with the guidelines prescribed by the SEBI / RBI.

Further, in the event of transfer of ownership of any existing or future FDI in an entity in India, directly or indirectly, resulting in the beneficial ownership falling within the aforesaid restriction / purview, such subsequent change in the beneficial ownership will also require approval of the Government. Furthermore, on April 22, 2020, the Ministry of Finance, Government of India has also made a similar amendment to the FEMA Rules.
